WEEKLY
STOCK INDICES ANALYSIS

MMA WEEKLY STOCK INDICES REPORT
FOR THE WEEK OF JUNE 1, 2026

GEOCOSMIC CRITICAL REVERSAL DATES (CRDs)

These dates affect all markets. They are the midpoints of geocosmic clusters and have a normal orb of three days on either side (82% rate of frequency). Sometimes, they expand to as much as six days (90+% frequency with that orb). The idea is to see a new two-week or greater high or low and then a reversal. It is especially effective when major, half-primary, or primary cycle troughs are due. These are more important than the solar-lunar reversal dates: the more stars, the greater the historical correlation with a cycle culmination. Please read Volume 3 of the Stock Market Timing series for more information. Below is the midpoint date, and in parentheses, the length of time containing the geocosmic signatures (known as a "cluster"). If the cluster is long (more than 15 days), there may be other possible reversals based on tighter geocosmic clusters within the greater cluster.

May 25* (holiday, so May 22-26. Lows in DJIA, Gold, Silver, Euro, and T-Notes)**
June 26-29*
July 6**
July 17-20* (This is the magnet for trend continuation and then reversal +/- 10 days)**

These periods are usually more important than the solar/lunar reversal zones. They are usually more accurate because they have a wider orb of time (+/- 3 trading days vs. +/- 1 trading day for solar/lunars). They will correspond more often with major, half-primary, or full primary cycles, whereas lunar reversals need only correspond to 2.5% reversals in stocks.

ABBREVIATIONS:
CRD = Geocosmic Critical Reversal Date
ATH = All-Time High
MA = Moving Average
PB = Primary cycle bottom
PT = Primary cycle top
MB = Major cycle bottom
MT = Major cycle top
TB = Trading cycle bottom
TT = Trading cycle top

DJIA Cash: Review by Gianni Di Poce and Ray Merriman, MMA Analysts: Last week's close was neutral. The close was above the weekly trend indicator point (TIP) for the 9th consecutive week, which means it remains in a trend run-up.

This week's trend indicator point (TIP) is 50,235. It will be downgraded back to neutral if it closes below there this week.

Weekly support is 50,533-50,642. A trade below, followed by a close back above this range, is a bullish trigger.

Weekly resistance is 51,312-51,422. A trade above here, followed by a close back below this range, is a bearish trigger.

Bullish crossover zones are in effect at 42,515-42,826, 36,359-36,747, 35,379-35,753, 34,442-34,524, 32,890-33,248, 31,468-31,997, 30,488-30,521, 24,769-24,894, 21,925-22,561, 18,931-19,018, 18,043-18,408, 17,348-17,352, 15,029-15,149, 13,717-13,760, 13,070-13,163, 12,799-12,802, 11,513-11,572, and 8266-8433.

The DJIA closed above bearish crossover zones previously at 46,489-46,529, 46,178-46,285, 44,391-44,529, 44,071-44,213, 35,208-36,348, 34,981-35,530, 34,378-34,426, 27,522-28,013, 20,599-21,252, 18,318-18,367, 18,083-18,087, and 16,892-17,314, so these are now support.

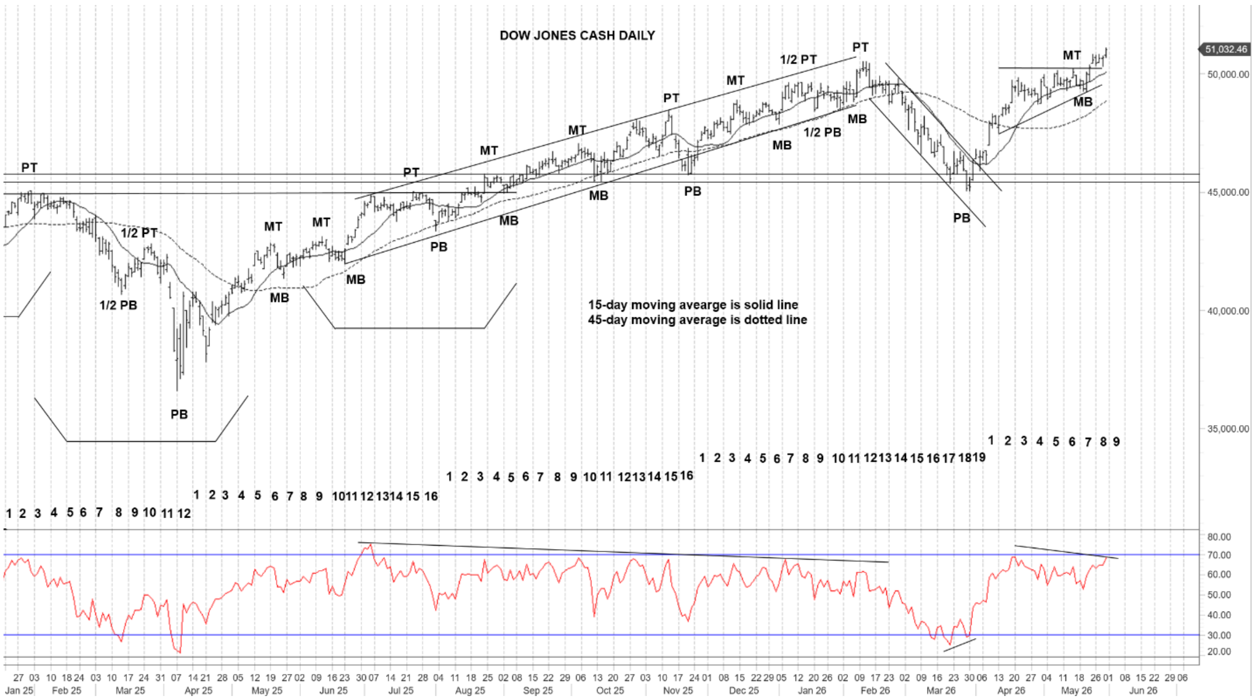
Trend Indicator Studies

The Basic Trend Indicator stays bullish and was reinforced again with last week's rally to a new all-time high. This comes after the higher-low via a major cycle trough on May 20 (last CRD zone), and as long as it continues making higher-highs and higher-lows, this will remain the case. There's still time in the primary and 50-week cycles for more new highs to follow.

The weekly trend-moving average indicator remains bullish in the Dow. The DJIA closed the week at 51,032, up 452 points from the prior week. The close was above the 25-week moving average (48,676), the 50-week MA (47,166), and the 78-week MA (45,455). The 25-week MA is still above the 50-week MA, and the 25- and 50-week MAs are well above the 78-week MA. Prices are above all the moving averages, so it's bullish. The Dow hit another new all-time high last week, and still has more time for additional 3-year cycle highs after forming its 50-week cycle low in the 51st week of the older cycle. The 50-week cycle has a range of 34-67 weeks, and in most cases, 38-62 weeks, so it was in the regular time band. This would only begin the 9th week of a new 50-week cycle. The faster-moving averages remain above the slower ones, and as long as this continues, the worst that could happen is for the Dow to be downgraded back to neutral.

Prices would have to decline below all moving averages to be downgraded back to neutral. The Dow would have to drop below each MA, with each faster MA crossing below the slower-moving averages to be downgraded to "bearish." If prices remain above all three moving averages, it will remain fully bullish.

The daily moving average trend study (for traders) remains bullish. The daily close (51,032) was *above* the 15-day moving average (50,072) and the 45-day MA at 48,845. The 15-day moving average is still above the 45-day moving average, and with prices above both, it's bullish. It would be downgraded back to bearish if prices close below both the 15-day average and the 45-day moving average, and if the 15-day average drops below the 45-day. It will be downgraded back to bullish-turning neutral if prices drop below the 15-day moving average, but it stays above the 45-day moving average. Note how prices tested the 15-day moving average at the major cycle low of May 20 after a 4-day corrective decline, which fits in the 3-8 day window.



The Primary Cycle and Longer Cycles

Preferred primary cycle labeling: This week starts the 9th week in the primary cycle from the March 30 low at 45,057. The low unfolded 19 weeks after the November 20 low at 45,728, and in the regular 13-23 week range for a cycle trough. It also occurred one day beyond the 3-day orb of the April 3-6 CRD, following a 7-week drop from the all-time high of February 10 at 50,512.

The primary cycle in the Dow is made up of two or three cycle phases. Major cycles (three-phase) in the Dow have a range of 5-8 weeks, while half-primary cycles (two-phase) have a range of 8-11 weeks. The Dow formed a major cycle low on May 20 at 49,235, one day outside of the orb of the May 25 CRD and in the 3-8 day corrective decline window for a bottom. This week, therefore, begins the 2nd week in the second major cycle phase.

The expectation remains for a rally beyond Tuesday of the 9th week of the cycle. This finally comes into play this week, and it's due to this being the first primary cycle phase within the greater 50-week cycle. It's on the verge of a major bullish confirmation here.

Alternate primary cycle labeling: There is none anymore.

Geocosmics and CRDs

It looks like the May 20 low was the one that corresponded with a reversal in the Dow, and it occurred within the orb of the May 22-26 three-star CRD. However, the bigger story from a geocosmic standpoint was the breakout signatures that carried the Dow to a new all-time high. This was centered around the Sun-Uranus conjunction on May 22, the same day as a Venus-Neptune square. Markets were even able to shake off the Mars-Pluto square of May 26, and it looks like the harmonious Sun-Pluto trine (both in air signs) led to a continuation of the breakout. It's rather tame on the geocosmic front this week, with the next CRD not coming until June 26-29. However, we have a nice Venus/Jupiter conjunction taking place on June 9, which could provide a backdrop for a sustained drift higher in the coming weeks.

Technicals, Chart Patterns, and Price Targets

Price Targets & Chart Patterns: The Dow's all-time high reinforces the bullish setup, especially following the higher-low on May 20. The Dow staged a clean breakout from a continuation pattern in the form of an ascending triangle, too. This is a strong bullish signal since the Dow's trend remains bullish, and these patterns imply continuation of that trend.

As stated last week and still the case, "*The pattern is projecting a rally to at least 52,000-52,250. Note how this overlaps with the previous upside objectives in the 53,450 +/- 1990 zone. Later on this year, the Dow maintains an upside objective in the 59,500-60,500 range, which may correspond to the next 50-week cycle crest. In terms of support, the path of least resistance remains higher in the Dow as long as it holds above 48,500-49,000*." With a major cycle low now confirmed, we can add 54,379 +/- 1099 as a price target for the next major cycle crest.

Intermarket Divergence: All indices hit new all-time highs last week, so there is no bearish intermarket divergence in play. Be on the lookout for this to play out, where one index makes a new high, but not all three, as we head into the end of June, especially.

Oscillator: The RSI indicator keeps signaling wide bearish divergence, and it's even wider from this past week's high, as are the slow stochastics. This means upside momentum has waned in the near term. Note how the major cycle low occurred in the RSI indicator's 40-60 range. It's still critical that the RSI indicator hits overbought (above 70) during this broader rally to confirm momentum has flipped back bullish.

Solar-lunar studies from 1930 by MMTA graduate student Yating Hu. We will now give values for full reversal, as well as highs and lows.

Lunar cycles for the next two weeks are as follows: Anything above 113 means there is a higher-than-expected probability of a reversal from an isolated high or low. The more *, the more likely a reversal. The more #, the less likely a reversal. If it states, "often a high" or "often a low," it means that a high or a low has occurred about twice as often as a high or a low in the past. However, if the value has an asterisk next to it, it should be looked upon more as a reversal, whether historically it has been more often a high or a low. Other figures to the right indicate reversal periods that deserve attention, as shown by the recent studies by MMTA student Yating Hu.

	Reversal 3%	High	Low
May 28-29	89.6	109.1	69.1
May 30-Jun 1	114.1*	137.6*	89.4
Jun 2-3	79.4	44.2	116.6*
Jun 4-6	135.9*	158.8*	111.7*
Jun 7-8	98.0	90.4	106.0
Jun 9-10	73.7	66.3	81.6
Jun 11-12	102.0	109.3	94.4
Jun 13-14	119.8*	100.0	140.8*

Strategy: Position traders are long with a stop loss on a daily close below 49,235 now after covering 1/3 for an excellent first profit. Let's cover another 1/3 on a rally to 52,300 +/- 60 if offered.

Aggressive traders are long with a stop on a daily close below 49,235 now after covering 2/3, buying back, and covering another 1/3 for an excellent profit. Let's cover 1/3 on a rally to 51,425 +/- 60 if offered.

Very aggressive traders are long with a stop on a daily close below 49,235 after covering 2/3 for an excellent first profit, buying back, and covering another 2/3 for an excellent profit. Let's cover the final 1/3 on a rally to 51,425 +/- 60 if offered and stand aside.

ESM (Jun S&P e-mini) by Gianni Di Poce, MMA Analyst.

Last week's close was bullish. The close was above the weekly trend indicator point (TIP) for the 8th consecutive week, indicating it remains in a trend run-up.

This week's trend indicator point (TIP) is 7490.75. It will be downgraded back to neutral if it closes below there this week.

Weekly support is 7530.50-7542.75. A close below this range would be bearish, whereas a trade below and a close back above is a bullish trigger.

Weekly resistance is 7636.25-7648.50. A close above this range would be bullish, whereas a trade above and a close back below is a bearish trigger.

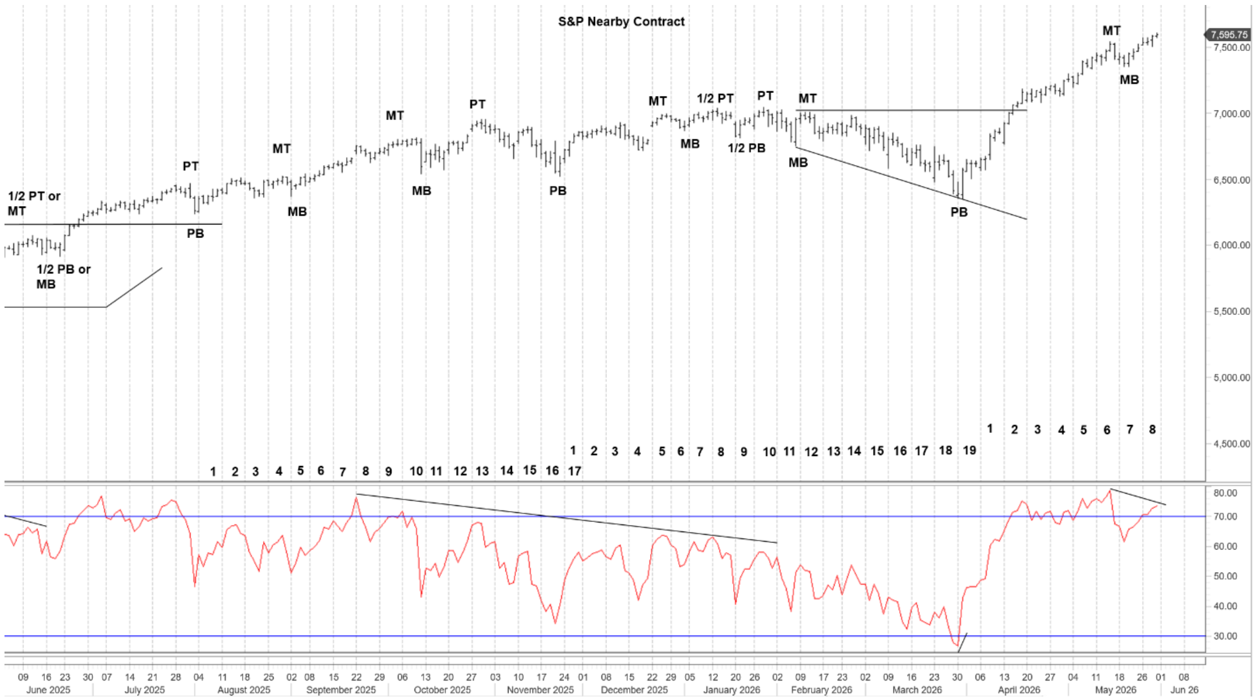
Bullish crossover zones are in effect at 5747.25-5853.75, 4684.50-4698.25, 4459.25-4460.50, 4221.75-4252, 3742.50-3817, 2588.25-2617.50, 2206.75-2219.25, 1661.25-1663, 1405.50-1418, 1381.75-1382.75, 1263-1263.25, 1184.25-1196.75, 889.55-902.40, and 791.10-791.25.

Prices previously closed above bearish crossover zones at 5459.75-5537.75, 4562-4566.25, 4439.50-4472.50, 4016.75-4051, 3375.50-3404.75, and 3180.50-3312.75, so these are support.

Preferred primary cycle labeling: This week starts the 9th week in the primary cycle, measured from the March 31 low at 6353.25. The low was 19 weeks after the November 21 low at 6525, and it fell in the regular 15-23 week range for a low. It also unfolded in the orb of the April 3-6 CRD.

The S&P also starts the 9th week of a newer 50-week cycle. Since it's in the first primary cycle phase of this new and greater 50-week cycle, a rally beyond Tuesday of the 9th week is in play, and this could finally unfold this week. It hit a new all-time high again last week, and the powerful bullish price action stems from the first phase of the cycle's tendency to be bullish. In most instances, 50-week cycles have shown 8-week rallies at a minimum, and it played out this time around, too. This implies the period of "easy money" to the upside is coming to an end in the near term.

The primary cycle breaks down into phases, including major cycles lasting 5-8 weeks and half-primary cycles lasting 8-12 weeks. The S&P completed a major cycle low on May 19 at 7354.25 after correcting 3 days from the major cycle crest of May 14 at 7540. This fell in the orb of the May 22-26 CRD. This week, therefore, starts the 2nd week in the second major cycle phase.



Alternate primary cycle labeling: There is none anymore.

Geocosmics: Please read the commentary for this section in the DJIA analysis. The analysis there is precisely the same for the S&P now.

Price targets and technicals: The S&P rallied to a new all-time high after forming a higher-low in the form of a major cycle trough on May 19, which further reinforces the trend in favor of the bulls. The resolution from the broadening wedge formation a couple of weeks ago continues. The pattern projects a rally as high as 7650-7700 in time. We're not far from that target now. This could be the high zone for the primary cycle crest, but it may get as high as 7750-7800. There's still time for this move to pan out.

There's a slight case of bearish divergence in price from the RSI indicator coming into play here. This could become a more cautionary signal a couple of weeks from now. The path of least resistance remains higher as long as it holds above 7050-7150, which was the former resistance near the previous all-time high. However, there's additional support in the 7250-7300 range, and above there, it remains bullish. A little bit of sideways action here in the next few trading sessions would be ideal.

Strategy: Position traders are long with a stop loss on a daily close below 7230 now, after covering 2/3 for an excellent profit already.

Aggressive traders are long with a stop loss on a daily close below 7230 now, after covering 2/3 for an excellent profit, and buying back. Traders were advised, "*Let's cover 1/3 on a rally to 7585 +/- 12 if offered.*" Got this off for another excellent profit. Let's cover another 1/3 on a rally to 7645 +/- 12 if offered.

VAG traders are long with a stop loss on a daily close below 7230. Traders were advised, "*Let's cover 1/3 on a rally to 7585 +/- 12 if offered.*" Got this off for an excellent first profit. Let's cover another 1/3 on a rally to 7645 +/- 12 if offered.

NQM (June e-mini-NASDAQ) by Pouyan Zolfagharnia, MMA Analyst. Note that we will be switching to the September contract (NQU) next week. The September contract is currently trading approximately 290 basis points above the June contract.

Last week's close was bullish, closing above the weekly resistance zone. The close was above the TIP for the 8th consecutive week, maintaining the trend of a run-up.

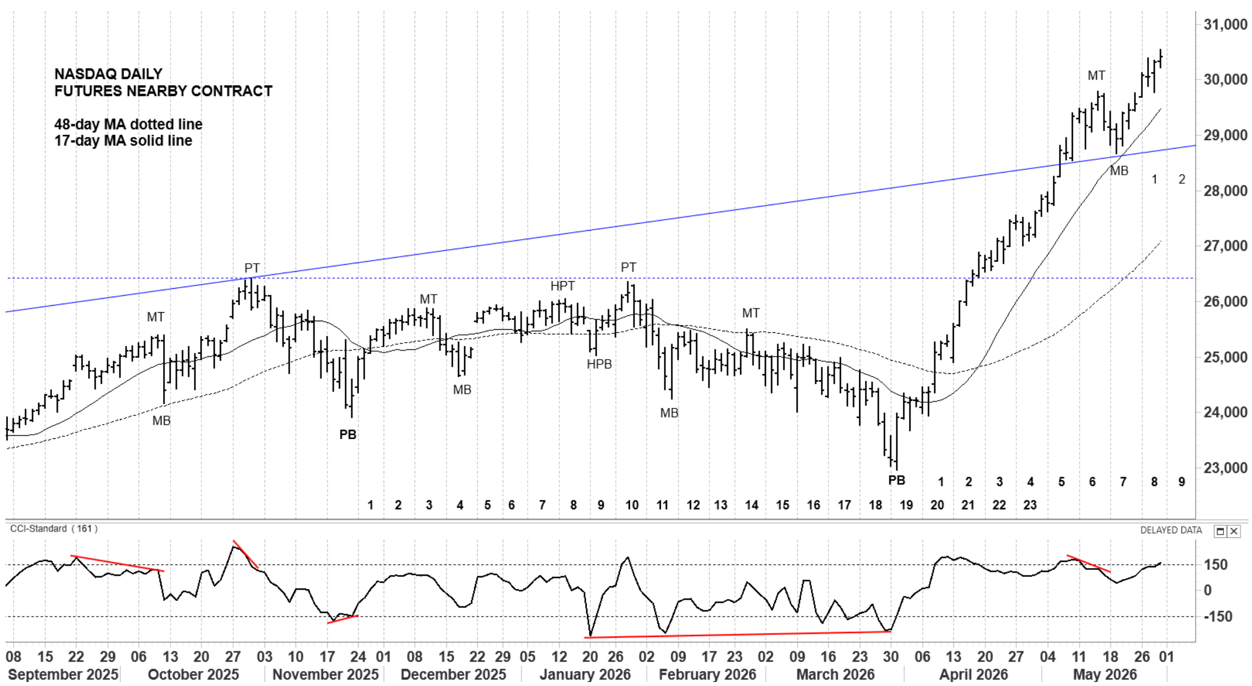
This week's TIP is 29,581. It will be downgraded back to neutral with a close below here this week.

Weekly support is 29,560-29,865. A close below this range would be bearish, whereas a trade below and a close back above is a bullish trigger.

Weekly resistance is 30,725-30,819. A close above this range would be bullish, whereas a trade above and a close back below is a bearish trigger.

A new bullish crossover zone formed at **29,959-29,960**. Prior zones remain in effect at 28,130-28,447, 25,837-25,851, 20,430-20,824, 16,448.50-16,499.50, 16,190-16,194, 14,674.25-14,723.50, 13,670.25-13,711.25, 12,042.25-12,149, 11,280-11,345, 5711-5745, 5482-5516.50, 5259-5275, 5085.75-5093.50, and 4410-4418.

Prices closed above previous bearish crossover zones at 18,812-18,818, 16,817-16,906, 16,108-16,197, 15,189-15,253, 12,955-13,084, 9073.50-9325.25, 6372-6489.50, 4747-4756, 4437-4540.25, 4410-4419, and 4176-4178. These are all support zones now.



Preferred primary cycle labeling: We are commencing week 9 of a new 15-23-week primary cycle measured off the March 31 low of 22,962. This low was also a 50-week cycle bottom as confirmed by the stellar rise to new ATHs.

Major cycles in the NASDAQ form between weeks 5-8 in a classical three-phase cycle and 8-12 weeks in a two-phase cycle. As noted last week, "*I believe the* [major cycle] *crest formed on May 14, and the first major cycle trough formed three days later on May 18 at 28,663, testing the 17-day moving average line*." We got our confirmation with this week's rally.

We have our first confirmation of a bullish cycle, as it has taken out the crest of the prior cycle. A new high after Tuesday of this week will provide the second confirmation.

It is still possible that this cycle may break down into a combination pattern, so we have to remain aware of the possibility of a sharp decline into a half-primary cycle over the next 4 weeks, into the end of June. Whilst the momentum is very bullish, the seasonal patterns show a low is possible at the end of June, which could also be the second major cycle trough.

Alternate primary cycle labeling: There is none.

Geocosmics: As noted last week, "*I would now like to see a breakout to new ATHs*." We don't have any powerful geocosmic signatures for the coming week, which would suggest the bullish rally should continue.

Price Targets and Technicals: The next 50-week MCP price target is 32,900 +/- 1,940. As noted last week, "*We should now break through 30,000 and form new ATHs*."

Strategy: Position traders are long 2/3 again, having reloaded at the major cycle trough. The stop-loss is 27,100. Look to cover another 1/3 at 32,500 +/- 100 if offered.

Aggressive traders are long 2/3 with a stop-loss below 28,000. Cover another 1/3 at 32,000 +/- 100 if offered.

Very aggressive traders are long 2/3 with a stop-loss below 28,000. Cover another 1/3 at 31,000 +/- 100 if offered.

ANNOUNCEMENTS & EVENTS

ANNOUNCEMENTS

NOTE 1: THE ANNUAL MMA MID-YEAR MARKET WEBINAR WITH MMA MARKET ANALYSTS WILL TAKE PLACE ON SATURDAY, JUNE 20, AT 1:00 PM EDT!!! In the comfort of your own home or office, you can tune in to MMA's annual Mid-Year Financial Markets Update Webinar. This year's webinar will be in a slightly different format than previous years. It will be hosted by Raymond Merriman, who will introduce each market and then conduct an interactive interview with the MMA analyst covering that market, discussing its outlook for the second half of 2026. The analysts and markets to be covered this year will include Bitcoin (Merriman), NASDAQ (Wiebke Held), S&P 500 and T-Notes (Gianni Di Poce), Euro (Ulric Aspegrén), Silver and Crude Oil (Pouyan Zolfagharnia), and Gold and Soybeans or Wheat (Wyatt Fellows). This webinar/workshop will last approximately three to four hours, with two five-minute breaks. The cost is $66 (a super bargain for a workshop covering these markets), which includes access to the live presentation via Zoom, the presentation slides, and the video recording of the live event that will be available within 24 hours after the presentation. This is MMA's annual mid-year financial markets update webinar. If you are unable to attend live, the video recording will be available the following day. To register, **click here**.

NOTE 2: THE THIRD EDITION OF THE NEW MMA MONTHLY CRYPTO REPORT WILL BE ISSUED THIS WEEK,

ON WEDNESDAY, JUNE 3!!! Each report features a cyclical and macro overview by Gianni Di Poce on Bitcoin, Ethereum, Solana, XRP, and one additional cryptocurrency selected based on current market interest, beginning with Cardano. Pouyan Zolfagharnia then provides a geocosmic overview and explains how it ties into the cycles. Together, they share strategies for both position and shorter-term trading in cryptocurrencies. **CLICK HERE** to subscribe to this new report.

CLICK HERE FOR A **RECORDING OF THE FREE CRYPTO WEBINAR, HELD ON APRIL 8.** Are you new to the crypto world? Do you wonder how to trade cryptocurrencies via wallets, futures, or ETFs? These and other topics are covered in this special instructional webinar on the new MMA Monthly Crypto Report. This **FREE WEBINAR** explains how to use the new Monthly Crypto Report for maximum value. Ray Merriman hosted this webinar, joined by Gianni Di Poce, Pouyan Zolfagharnia, and MMA President Wyatt Fellows.

NOTE 3: THE MMA 2026 TRADING AND INVESTMENT RETREAT WAS AMAZING! The best yet! Recordings are now available. Catch the excitement of this amazing event while it's hot!

This special four-day retreat started off with Ray Merriman's introduction to the "Post–Aries Vortex Era" that officially began with the geocosmic setup of February 20, 2026, and the political event of April 7, 2026, that gave peace a chance.

This retreat included special presentations and interactive discussions on current and future world conditions through 2030 that are likely to affect financial markets. These were led by world-class mundane astrologers Claude Weiss (Switzerland), Christeen Skinner (UK), Christof Niederwieser (Germany), Pouyan Zolfagharnia (UK), and Raymond Merriman (USA). Joining them to discuss MMA timing methods and short-term trading strategies were MMTA Director Wiebke Held (Germany) and MMA analysts Wyatt Fellows (USA), Ulric Aspegrén (Switzerland), Gianni Di Poce (USA), and MMA Trading Coach Rita Perea (USA).

The retreat covered the unique, research-based MMA methods for identifying primary, half-primary, major, and trading cycles. *It also covered the setup and steps required for applying MMA's solar/lunar reversal dates for very short-term aggressive trades in Bitcoin, stock indices, and precious metals.*

To order the recordings of this special event, please **click here**.

NOTE 4: A SIX-WEEK SUMMER SCHOOL COURSE ON ESOTERIC ECONOMICS BY GIANNI DI POCE WILL BEGIN ON SUNDAY, JULY 12. Stay tuned for details and registration information. This course will be based on Gianni's new book of the same name, which has just sold out its first printing. A second printing will be ready in time for this course.

NOTE 5: Speaking of new books and printing… Ray Merriman has just completed the writing of *Jupiter and Saturn Transits: Mastering the Cycles of Life*. This 400+ page book covers all the major transits of Jupiter to one's natal planets and angles, including interpretations of the opening and closing sextiles, squares, and trines. The Saturn section also includes the opening and closing semi-square and sesquiquadrate transits to all natal planets and angles, plus the "Business Cycle" of Saturn as it transits up the chart from the IC to the MC, and then back down again from the MC to the IC. It also ranks each transiting aspect between –3 and +3 in terms of trading and investment potential, which alone is worth the price of the book. Transits are the most important forecasting tools in any professional astrologer's skill set, and the book explains the techniques used to apply transits in one's consulting practice. This book shows how transits are used in forecasting events and periods of conflict and opportunity that shape one's destiny and, hence, identity. Stay tuned for a special pre-publication offer for the first edition of this new book by

Ray Merriman, due out in August, which promises to become a classic reference source of personal guidance for both professionals and students of astrology for many years to come.

NOTE 6: WE HAVE JUST COMPLETED A NEW UPGRADE FOR THE FAR FOR THE GALACTIC TRADER SOFTWARE PROGRAM!!! We can now conduct solar/lunar weighted value studies for any market by isolating or omitting any planet that is retrograde! For instance, we can now compare solar/lunar values for any market when Mercury (or Venus, Mars, or any other planet) is retrograde or direct, or both. This is important because we have noticed that when Mercury is retrograde, the lunar values for Bitcoin perform differently in many cases than when Mercury is direct. If you don't own the FAR for the Galactic Trader program, which is key to conducting MMA research studies and identifying turning points in any financial market, and you wish to know more about it, please **click here**. The cost is $1895 (end-of-day version) and includes Jeanne Long's Galactic Trader software, featuring extensive W. D. Gann trading tools that she created.

NOTE 7: THE *JUPITER REPORT: YOUR MOMENTS OF OPPORTUNITY*! The *Jupiter Report* is written by Raymond Merriman. It is a 30- to 40-page report that all traders (and even non-traders) will find highly valuable. It identifies the times during the year when Jupiter transits are highlighted in your natal chart and explains the meaning of Jupiter's transits to your natal planets and angles over a 14-month period (including one month before your order date and one month after the year ends). *As an added bonus, each transit is ranked on a scale from –3 to +3 in terms of favorability for trading. Traders may find this especially valuable!* Would you like to know if you are under a +3 transit and therefore most likely to experience trading success? Or a –3 transit, with a stronger-than-usual potential for misjudgments that can be costly? The price for a personal 14-month *Jupiter Report* based on your birth data is $69.

Coming soon! *The Saturn Report: Mastering Your Life Cycles*. Due out in late summer.

NOTE 8: THE *MMA SOLAR-LUNAR APP* OFFERS REVERSAL SIGNALS FOR THE DJIA, NASDAQ, GOLD, AND SILVER. It is an ideal tool to have in your back pocket if you are a short-term swing trader looking for high-probability dates that identify isolated lows and highs in these markets. Please note that this should not be used as a standalone system. It works best as an adjunct tool when cycle lows or highs are due, when a market is in a technically overbought or oversold condition, or when it is exhibiting intermarket bullish or bearish divergence relative to a related market. The app is currently available only on Apple devices (iPhone and iPad). **To learn more about the MMA app, click here.** To order, go to the Apple App Store and search for *Merriman Solar-Lunar Reversals.*

EVENTS

JUNE 20, 2026: MMA'S ANNUAL MID-YEAR MARKETS UPDATE WEBINAR. Save the date! Note that the date has been moved up one day to Saturday, June 20, at 1 PM EDT.

JULY 12, 2026: "Esoteric Economics" course begins with Gianni Di Poce. Stay tuned for details.

SEPTEMBER 3, 2026: A UAC PRE-CONFERENCE WORKSHOP ON FINANCIAL ASTROLOGY BY RAYMOND MERRIMAN, 1:00–5:00 PM. This workshop will take place at the United Astrology Congress (UAC), the largest astrological conference in the world, which is held every four to eight years. More than 150 world-class astrologers will be presenting, and over 1500 attendees will be present. The conference will be held at the Marriott Downtown Chicago Magnificent Mile Hotel. In addition to the workshop, Ray will present another lecture during the six-day event on mundane astrology, titled "What Is Happening in the World from an Astrological Viewpoint," on September 5. **For more information, visit www.uacastrology.com.**

<u>Disclaimer and proper use of this information</u>: Futures and options trading involve the risk of large losses as well as large gains.

Information is provided herein with sincere intent and according to MMA's original research studies and methodologies. These reports are provided mainly for "speculators." By its very nature, "speculation" means "willing to take the risk of loss." "Speculators" must be willing to accept the fact that they are going to have losing trades, many more than, say, "investors." That is why they are "speculators." The way "speculators" become profitable is not so much by a high percentage of winning trades but by controlling the amount of loss on any given trade, so the average trade on winners is considerably more than the average trade on losing trades.

MMA's comments, strategies, and data are provided as guidelines for traders each day and/or week. Comments and strategies are based upon intraday and intraweek highs, lows, and closes at the end of the day or week. Traders are advised to use these only as guidelines - and use intraday analysis to establish positions in the directions of comments given, so long as those support/resistance (entrance) areas. Looks favorable according to intraday analysis as well. Support and resistance are areas for day traders to look to buy and sell intraday. No guarantees are made for accuracy.

Support may represent favorable risk/reward places to buy if the trend is up. If prices trade below support, then have a close back above; it is considered a bullish "trigger" and oftentimes represents a good buy signal. Resistance may represent favorable risk/reward places to go short if the trend is down. If prices trade above it, then have a weekly close back below; it is considered a bearish "trigger" and oftentimes is a good sell signal.
