

**MMA WEEKLY STOCK INDICES REPORT
FOR THE WEEK OF JULY 6, 2026**

Note: Mercury turned retrograde June 29 and will remain retrograde until July 23. As Ray has often advised, Mercury retrograde periods can coincide with mixed signals, false starts, and sudden reversals. Position traders may wish to exercise added caution before initiating new positions during this period and wait for stronger confirmation before entering new trades.

GEOCOSMIC CRITICAL REVERSAL DATES (CRDs)

These dates affect all markets. They are the midpoints of geocosmic clusters and have a normal orb of three days on either side (82% rate of frequency). Sometimes, they expand to as much as six days (90+% frequency with that orb). The idea is to see a new two-week or greater high or low and then a reversal. It is especially effective when major, half-primary, or primary cycle troughs are due. These are more important than the solar-lunar reversal dates: the more stars, the greater the historical correlation with a cycle culmination. Please read Volume 3 of the Stock Market Timing series for more information. Below is the midpoint date, and in parentheses, the length of time containing the geocosmic signatures (known as a "cluster"). If the cluster is long (more than 15 days), there may be other possible reversals based on tighter geocosmic clusters within the greater cluster.

June 26-29* (Mercury retrograde)

July 6**

July 11* (midpoint of Mercury Rx when markets that did not reverse at the time of the retrograde +/- 2 trading days may do so now)

July 17-20* (This is the magnet for trend continuation and then reversal +/- 10 days)**

July 24-27 (Mercury direct)**

Aug 7-10*

Aug 14-17**

These periods are usually more important than the solar/lunar reversal zones. They are usually more accurate because they have a wider orb of time (+/- 3 trading days vs. +/- 1 trading day for solar/lunars). They will correspond more often with major, half-primary, or full primary cycles, whereas lunar reversals need only correspond to 2.5% reversals in stocks.

DJIA Cash: Review by Gianni Di Poce and Ray Merriman, MMA Analysts: Last week's close was bullish. The close was above the weekly trend indicator point (TIP) for the 14th consecutive week, which means it remains in a trend run-up.

This week's trend indicator point (TIP) is 52,089. It will be downgraded back to neutral if it closes below there this week.

Weekly support is 52,265-52,423. A trade below, followed by a close back above this range, is a bullish trigger.

Weekly resistance is 53,219-53,377. A trade above here, followed by a close back below this range, is a bearish trigger.

Bullish crossover zones are in effect at 42,515-42,826, 36,359-36,747, 35,379-35,753, 34,442-34,524, 32,890-33,248, 31,468-31,997, 30,488-30,521, 24,769-24,894, 21,925-22,561, 18,931-19,018, 18,043-18,408, 17,348-17,352, 15,029-15,149, 13,717-13,760, 13,070-13,163, 12,799-12,802, 11,513-11,572, and 8266-8433.

The DJIA closed above bearish crossover zones previously at 46,489-46,529, 46,178-46,285, 44,391-44,529, 44,071-44,213, 35,208-36,348, 34,981-35,530, 34,378-34,426, 27,522-28,013, 20,599-21,252, 18,318-18,367, 18,083-18,087, and 16,892-17,314, so these are now support.

Trend Indicator Studies

The Basic Trend Indicator was once again reinforced in favor of the bulls last week, with the new all-time high on July 2 at 52,903. This unfolded after another higher-low via a major cycle trough on June 23 at 51,301. The trend remains bullish. It can still make new highs in the primary and 50-week cycles, but we're starting to get into the later stages of the primary cycle, and downside risks are rising, given the intermarket bearish divergence signals now present between all three indices.

The weekly trend-moving average indicator remains bullish in the Dow. The DJIA closed the week at 52,900, up 1023 points from the prior week. The close was above the 25-week moving average (49,285), the 50-week MA (47,943), and the 78-week MA (45,986). The 25-week MA is still above the 50-week MA, and the 25- and 50-week MAs are well above the 78-week MA. Prices are above all the moving averages, so it's bullish. The Dow hit another new all-time high last week, and still has time for additional 3-year

cycle highs to form. The 50-week cycle has a range of 34-67 weeks, and in most cases, 38-62 weeks, so it was in the regular time band. This starts the 14th week of a new 50-week cycle. The faster-moving averages remain above the slower ones, and as long as this continues, the worst that could happen is for the Dow to be downgraded back to neutral.

Prices would have to decline below all moving averages to be downgraded back to neutral. The Dow would have to drop below each MA, with each faster MA crossing below the slower-moving averages, to be downgraded to "bearish." If prices remain above all three moving averages, it will remain fully bullish.

The daily moving average trend study (for traders) remains bullish. The daily close (52,900) was *above* the 15-day moving average (51,834) and the 45-day MA at 50,698. The 15-day moving average is still above the 45-day moving average, and with prices above both, it's bullish. It would be downgraded back to bearish if prices close below both the 15-day average and the 45-day moving average, and if the 15-day average drops below the 45-day. It will be downgraded back to bullish-turning neutral if prices drop below the 15-day moving average, but it stays above the 45-day moving average.

The Primary Cycle and Longer Cycles

Preferred primary cycle labeling: This week starts the 14th week in the primary cycle from the March 30 low at 45,057. The low that started the cycle was 19 weeks after the November 20 low at 45,728, and in the typical 13-23 week range for a cycle low. It also bottomed one day following the 3-day orb of the April 3-6 CRD, after a 7-week pullback from the all-time high of February 10 at 50,512.

The primary cycle in the Dow breaks down into two or three cycle phases. Major cycles (three-phase) in the Dow last 5-8 weeks, and half-primary cycles (two-phase) last 8-11 weeks. The Dow completed a major cycle low on May 20 at 49,235, inside the orb of the May 22-26 CRD and within the 3-8 day corrective time band for a bottom. On June 10, the 10th week, it completed a 7-11 week half-primary cycle trough. Thus, the DJIA now starts the 4th week of its second half-primary cycle in a "combination" pattern. The next low is due in 3-7 weeks.

But as explained last week, *"...there's a chance it formed the second major cycle trough on June 23 at 51,301, following a 3-day corrective decline from an isolated high on June 17 at 52,281. The low would have been in the orb of the June 26-29 CRD. Prices then rallied to a new all-time high on June 25 at 52,665. If June 23 wasn't a major cycle trough, then the June 25 high could be the primary or second major cycle phase high, since this week could start the 6th week in an older major cycle. But if it starts the 1st week in the third and final major cycle phase instead, then we can't rule out that June 25 was a primary cycle crest either, especially since it was late in the primary cycle."* With last week's rally to new all-time highs, the June 23 low at 51,301 was confirmed as a major cycle trough. This week therefore begins the 2nd week in the third and final major cycle phase. Since we hit a new all-time high again, we can't rule out that this final phase unfolds in a parabolic manner.

This first primary cycle phase within the greater 50-week cycle is bullish, and as a rule, cycles that spend more time going up than down exhibit "bullish right translation," and often signal positive things for the cycle to follow. We're looking for the primary cycle crest preferably in the July 17-20 CRD. There's currently a bias for the next primary cycle to be bullish too.

Alternate primary cycle labeling: There is none anymore.

Geocosmics and CRDs

Last week stated, *“June 17 remains a candidate for a major cycle crest, and the June 23 low could have been the reversal associated with the June 26-29 CRD. Mercury will now be retrograde until July 23, and if it coincides with a rally higher, it could easily and violently reverse those gains by the end of the retrograde period. Mars will also be conjunct Uranus on July 4, and Mars will then trine Pluto on July 5... The midpoint of Mercury retrograde is on July 9. If stocks don’t have a major or greater cycle reversal within four days of turning retrograde (June 29), then look for a bigger reversal within 2 days of the midpoint.”* So far, we’re getting the rally higher to new all-time highs. This week also has Sun square Saturn on July 6 and Neptune retrograde on July 7. Neptune’s planetary directional changes are especially powerful for primary or greater cycle crests or troughs per our studies.

We also have the Mercury Rx midpoint happening towards the end of this week (July 11), when markets that did not reverse around the start of the retrograde may do so within 2 trading days of the midpoint. So let’s see if the rally will reverse from a high later this week or if it can make it to the July 17-20 CRD period. The irrational exuberance of Jupiter trine Neptune and sextile Uranus (July 20-21) could be starting now.

Technicals, Chart Patterns, and Price Targets

Price Targets & Chart Patterns: The Dow looks to be breaking out from the ascending price channel. When these patterns are presented in uptrends, they can correspond to parabolic blow-off rallies. However, Mercury is retrograde, so these rallies can unwind just as fast.

Last week, I explained, *“The primary focus now is the ascending price channel on the Dow’s daily chart. These are continuation patterns too, and as long as prices stay within the channel, it’s bullish. If prices drop below the lower trendline of the channel, it would only mean that the market’s rate-of-ascent, or slope, is no longer valid. If it breaks out above the upper trendline of the pattern, it could rally into a blow-off top in the 59,500-60,500 zone for this primary cycle. However, the preferred upside objective for a final rally in this primary cycle is in the 55,000-56,000 zone. The greater target at 59,600-60,500 is preferred for late-summer or early-fall. As long as the Dow holds above 48,500-49,000, the path of least resistance remains higher.”* No change on these price targets for now, as 55,000-56,000 remains in the crosshairs for this market. A retest of 51,000-52,000 would be expected at the least for a primary cycle trough.

Intermarket Divergence: This is perhaps the biggest concern in the market right now, as the Dow keeps making new all-time highs, but ESU and NQU have not been able to exceed their all-time highs made on June 2 and June 22, respectively. Unless ESU and NQU hit a new all-time high in the next week or two, we’re setting up for the primary cycle crest now.

Oscillator: The bearish divergence in price from the RSI indicator is ever present, but not as wide now compared to the previous week. We remain in the territory now where a primary cycle crest could form at any time, so this warning signal should be heeded as it implies upside momentum is waning. The 15-day slow stochastic is also exhibiting bearish oscillator divergence (new high in price, but not in the oscillator)

Solar-lunar studies from 1930 by MMTA graduate student Yating Hu. We will now give values for full reversal, as well as highs and lows.

Lunar cycles for the next two weeks are as follows: Anything above 113 means there is a higher-than-expected probability of a reversal from an isolated high or low. The more *, the more likely a reversal. The more #, the less likely a reversal. If it states, "often a high" or "often a low," it means that a high or a low has occurred about twice as often as a high or a low in the past. However, if the value has an asterisk next to it, it should be looked upon more as a reversal, whether historically it has been more often a high or a low. Other figures to the right indicate reversal periods that deserve attention, as shown by the recent studies by MMTA student Yating Hu.

	<u>Reversal 3%</u>	<u>High</u>	<u>Low</u>
Jul 2-3	131.5*	116.8*	146.0*
Jul 4-5	104.0	73.5	134.0*
Jul 6-8	121.0*	148.6*	93.9
Jul 9-10	96.9	76.1	117.5*
Jul 11-12	82.7	93.9	71.8
Jul 13-14	95.5	68.0	122.5*
Jul 15-16	98.8	125.9*	72.2
Jul 17-18	86.7	87.5	85.9
Jul 19-20	102.8	124.5*	81.6
Jul 21-22	94.9	112.7	77.5

Strategy: Position traders are long with a stop loss on a daily close below 51,202 now after covering 2/3 for an excellent first profit. Let's cover the final 1/3 on a rally to 55,000 +/- 60 if offered and stand aside.

Aggressive traders are flat and may go long on a drop to 51,800 +/- 60 with a stop loss on a close below 51,202 if offered.

Very aggressive traders are long with a stop loss on a close below 51,202 after covering 1/3 for a nice first profit. Let's cover another 1/3 on a rally to 53,000 +/- 60 if offered.

ESU (Sep S&P e-mini) by Gianni Di Poce, MMA Analyst.

Last week's close was mostly bullish and ends the bearish sequence. The close was above the weekly trend indicator point (TIP) for the 1st time in 3 weeks, which means it remains neutral.

This week's trend indicator point (TIP) is 7507.75. It will remain neutral unless it closes sharply higher or lower this week.

Weekly support is 7419.50-7430.25. A close below this range would be bearish, whereas a trade below and a close back above is a bullish trigger.

Weekly resistance is 7615.25-7626.25. A close above this range would be bullish, whereas a trade above and a close back below is a bearish trigger.

Bullish crossover zones are in effect at 5747.25-5853.75, 4684.50-4698.25, 4459.25-4460.50, 4221.75-4252, 3742.50-3817, 2588.25-2617.50, 2206.75-2219.25, 1661.25-1663, 1405.50-1418, 1381.75-1382.75, 1263-1263.25, 1184.25-1196.75, 889.55-902.40, and 791.10-791.25.

A bearish crossover zone recently formed at 7598.50-7604. It has to close above here to remove the bearish stigma of this signal. Prices previously closed above bearish crossover zones at 5459.75-5537.75, 4562-4566.25, 4439.50-4472.50, 4016.75-4051, 3375.50-3404.75, and 3180.50-3312.75, so these are support.

Preferred primary cycle labeling: This week starts the 14th week in the primary cycle from the March 31 low at 6353.25. The low unfolded 19 weeks after the November 21 low at 6525, in the regular 15-23 week time band for a low, and it was in the orb of the April 3-6 CRD.

The S&P also starts the 14th week of the 50-week cycle. The S&P still hasn't made a new cycle high beyond Tuesday of the 9th week, unlike the Dow. This needs to happen as soon as possible, especially given the ongoing case of intermarket bearish divergence to the Dow.

The primary cycle is made up of phases that include major cycles lasting 5-8 weeks and half-primary cycles lasting 8-12 weeks. The S&P formed a major cycle low on May 19, in the May 22-26 CRD, at 7354.25 after dropping for 3 days from the major cycle crest of May 14 at 7540. Another major cycle trough occurred on June 26 at 7357.25 after a 4-day corrective decline into the low from the June 22 crest. This week therefore begins the 2nd week in the third and final major cycle phase. But there's a combination pattern unfolding here too, with this week starting the 4th week in the second half-primary cycle from the June 11 low. The half-primary cycle pattern and labeling are the more dominant at this point.

Alternate primary cycle labeling: There is none anymore.

Geocosmics: Please read the commentary for this section in the DJIA analysis. The analysis there is precisely the same for the S&P now.

Price targets and technicals: The S&P may have formed a lower-high on June 22, but it may have just formed a higher-low on June 26. In the bigger picture, it keeps consolidating near the all-time highs, which is bullish price action. The long-term trend remains up, so the trend bias is still bullish.

Last week's report stated, *"The S&P has spent the last few weeks consolidating into an ascending triangle pattern. These are known to be continuation formations, which means they often resolve in the direction of the underlying trend. However, the catch here is that the primary cycle is starting to mature. Continuation patterns that present themselves late in cycles must be met with a healthy dose of caution. For now, we'll still look for a close above 7623 to coincide with a breakout as high as 7950-8050."* No change in this target for now as the triangle remains intact. An argument could even be made that the S&P is tracing out an inverted head and shoulders pattern with a target near 8000 should it break out to new all-time highs.

As long as the S&P stays above 7200-7250, it's still healthy from a technical standpoint. Note how the RSI indicator remains in the 40-60 range, which is ideal for a correction/consolidation. We need to be alert for the RSI to hit overbought (above 70) on any new highs from here on out, too.

Strategy: Position traders are long with a stop loss on a daily close below 7395 now, after covering 2/3 for an excellent profit already. Let's cover the final 1/3 on a rally to 8000 +/- 12 if offered and stand aside.

Aggressive traders are long with a stop loss on a daily close below 7395 now, after covering 2/3 for an excellent profit, buying back, and covering another 2/3 for an excellent profit. Let's cover the final 1/3 on a rally to 7800 +/- 12 if offered and stand aside.

VAG traders are long with a stop loss on a daily close below 7395 now, after covering 2/3 for an excellent profit. Let's cover the final 1/3 on a rally to 7800 +/- 12 if offered and stand aside.

NQU (September e-mini-NASDAQ) by Pouyan Zolfagharnia, MMA Analyst.

Last week's close was a bearish trigger with prices rallying above the weekly resistance zone, but closing back down below it. The close was below the TIP for a second week, retaining the neutral trend.

This week's TIP is 30,051. It will be downgraded to a trend run down if we close lower this week.

Weekly support is 28,889-29,017. A close below this range would be bearish, whereas a trade below and a close back above is a bullish trigger.

Weekly resistance is 30,215-30,343. A close above this range would be bullish, whereas a trade above and a close back below is a bearish trigger.

Bullish crossover zones remain in effect at 28,130-28,447, 25,837-25,851, 20,430-20,824, 16,448.50-16,499.50, 16,190-16,194, 14,674.25-14,723.50, 13,670.25-13,711.25, 12,042.25-12,149, 11,280-11,345, 5711-5745, 5482-5516.50, 5259-5275, 5085.75-5093.50, and 4410-4418.

Last week, a new bearish crossover zone formed at **30,187-30,200**, which has managed to act as resistance. Prices closed above previous bearish crossover zones at 30,133-30,274, 18,812-18,818, 16,817-16,906, 16,108-16,197, 15,189-15,253, 12,955-13,084, 9073.50-9325.25, 6372-6489.50, 4747-4756, 4437-4540.25, 4410-4419, and 4176-4178. These are all support zones now.

Preferred primary cycle labeling: We are commencing week 14 of the 15-23-week primary cycle measured off the March 31 low of 22,962. This low was also a 50-week cycle bottom, as confirmed by the stellar rise to new ATHs.

We now have both confirmations for a bullish cycle by taking out the crest of the prior cycle and forming new highs after Tuesday of week 9.

Major cycles in the NASDAQ form between weeks 5-8 in a classical three-phase cycle and 8-12 weeks in a two-phase cycle. The first major cycle low formed on May 19 at 28,663. The half-primary trough formed on June 9 in the 10th week. Therefore, we are in a bullish combination cycle. Thus, we are commencing the 7th week of the second major cycle and the 4th week of the second half-primary cycle, although the half-primary cycle labeling now appears to be the more dominant interpretation.

As noted last week, "We are now dropping into the second major cycle trough, which may have formed on Friday by re-testing the trendline and the 48-day MA. We remain in the orb of the second major cycle trough and may see prices continue to drop into the July 6 CRD. Once the low is in, I am expecting a rally to a new ATH as long as prices remain above the June 9 low of 28,508." We are now in the July 6 CRD and the Nasdaq is pulling back as expected. A major cycle low should be in place by Thursday of this week. There is a chance the second major cycle low formed on June 26. If so, we are commencing the 2nd week in the third and final major cycle.

One troubling indicator now in effect is a bearish Lorusso 5-pointer, sometimes called a "megaphone" chart pattern, where you get a high, followed by a low, followed by a higher high, followed by a lower low, and then ending with a third higher high. This 5-point reversal pattern often accompanies new bear markets but isn't confirmed until the last low (June 9) is taken out. A second troubling factor is that there is intermarket bearish divergence between all three indices, with the DJIA making a new high last week, the NASDAQ two weeks ago, and the S&P a month ago.

Alternate primary cycle labeling: There is none.

Geocosmics: As noted last week, *"My bias is that the second major cycle trough may have just formed. Looking at the lunar cycles presented graphically in the MMA Monthly Addendum Plus+ report, we can see that a trough was expected June 26-29. If the low holds, I would like to see a rally into mid-July where the primary cycle crest may form under the Jupiter convergence aspects to Uranus, Neptune, and Pluto. It's worth noting that we are now in the time band where any primary cycle crest may actually be the 18-year crest, too."* If the June 26 low holds, we should see a rally into mid-July. If not, we are still in the time band for a second major cycle low to form ideally this week or next.

Price Targets and Technicals: The upside 50-week MCP price target remains at 32,900 +/- 1,940. We are now within the lower boundaries of this target. Prices have been well supported by the 48-day moving average on pullbacks. A breach of this moving average going forward would be an early indication this primary cycle has topped out.

Strategy: Position traders are long 2/3 again, having reloaded at the major cycle trough. The stop-loss is 27,100. Cover 1/3 at 31,000 +/- 100 if offered.

Aggressive traders are long 2/3 with a stop-loss below 28,000. Cover 1/3 at 30,800 +/- 100 and all at 31,000 +/- 100 if offered.

Very aggressive traders are long 1/3 with a stop-loss below 28,000. Cover all at 30,700 +/- 100 if offered.

ANNOUNCEMENTS & EVENTS

ANNOUNCEMENTS

NOTE 1: THE JULY ISSUE OF THE [MMA MONTHLY CYCLES REPORT](#) WILL BE RELEASED THIS WEEK, JULY 7–8. This issue will be especially timely because it will cover the powerful Jupiter convergence taking place July 15–25, when Jupiter will sextile Uranus, trine Neptune, and form an opposition to Pluto, all during the first of five passages of the Uranus–Pluto trine that will continue into 2028. Will the U.S. stock market melt up to a new all-time high before beginning a powerful decline? Or will it continue breaking to new highs? Each issue includes our outlook for the U.S. stock market (DJIA and S&P), Gold, Silver, Copper, Treasuries, the Euro currency, Crude Oil, and Soybeans. The MMA Monthly Cycles Report also provides MMA's original geocosmic CRDs and solar/lunar reversal dates over the next several weeks, as well as trading strategies for both position traders and aggressive short-term traders. If you would like to try a one-month subscription, you can sign up for the [July issue](#) for only \$35 — or save by ordering a three-report or twelve-report subscription.

Additionally, the monthly [MMA European Cycles Report](#), covering the DAX and SMI, and the [MMA Japan Cycles Report](#), covering the Nikkei stock index and the Dollar/Yen outlook, will be issued Tuesday–Wednesday, when these markets will also be at critical junctures.

NOTE 2: A SIX-WEEK SUMMER SCHOOL COURSE ON ESOTERIC ECONOMICS: THE HIDDEN ARCHITECTURE OF WEALTH, BY GIANNI DI POCE, WILL BEGIN ON SUNDAY, JULY 12. This immersive, six-week online course is the complete companion to *Esoteric Economics*, the financial astrology textbook by [Gianni Di Poce](#). The course touches on conventional economics, but it also reveals the deeper, often invisible currents that truly govern wealth: archetypal forces, temporal rhythms, capital flows, and the ancient principles that have shaped civilizations for millennia. The course blends rigorous historical and technical

analysis with esoteric insight, practical tools, and visionary thinking. You will not simply study economics — you will be initiated into its hidden language and learn to navigate it with clarity, confidence, and creative power. The cost of this six-week course is \$300, and registration is now open! Click [here](#) to register.

NOTE 3: [THE ANNUAL MMA MID-YEAR MARKET WEBINAR](#) WITH MMA MARKET ANALYSTS WAS GREAT — AND RECORDINGS ARE NOW AVAILABLE. This year's webinar was conducted in an interview format hosted by Raymond Merriman. The feedback from attendees was very positive, with many saying they loved the new interactive format in which Ray presented his views and then invited each analyst to share their outlook for the second half of 2026. The analysts and markets covered this year included NASDAQ (Wiebke Held), DJIA (Gianni Di Poce), Euro (Ulric Aspegren), Bitcoin (Ray Merriman), Silver and Crude Oil (Pouyan Zolfagharnia), and Gold and T-Notes (Wyatt Fellows). The webinar lasted just over three hours, with two five-minute breaks, yet no one seemed to get exhausted thanks to the lively exchanges. The recording costs \$66 (a super bargain for a workshop covering these markets), which includes the presentation slides. The markets discussed are still very relevant, and many of the setups described are indeed unfolding now! To order, [click here](#).

Here are three of the many positive responses to the new format and the content:

Today's webinar was fantastic. I loved the format. There's a lot of talent in MMA. I listen, learn, and make a lot of money using MMA's products. Your technical analysis schoolhouse mirrors what the CIA created 25 years ago for their analysts (Sherman Kent School for Intelligence Analysis). Students graduating from your program today will carry your legacy forward for the next 50 years.

— R.B., veteran trader

That is great feedback! I really enjoyed it too and learned a lot from the team.

— Pouyan Zolfagharnia, MMA Crude Oil and Silver analyst

I also noticed a great improvement, as we showed a unified team (including the same slide background) and more of a discussion rather than a presentation. I think it helped viewers acquire greater clarity through a more active process during the webinar, where you tightened up possible outcomes across many markets.

— Ulric Aspegren, MMA Euro analyst from the webinar

NOTE 4: COMING SOON: RAY MERRIMAN'S NEW BOOK, [JUPITER AND SATURN TRANSITS: MASTERING THE CYCLES OF LIFE](#). This is Book One, the first of five books that will be written on the outer planets transiting the natal chart over the next four years. Nothing like this has ever been done in the history of astrology. This first book, on the transits of Jupiter and Saturn, is approximately 425 pages long, covering all the major transits of Jupiter to one's natal planets and angles, including interpretations of the opening and closing sextile, square, and trine aspects. The Saturn section also includes the opening and closing semi-square and sesquiquadrate transits to all natal planets and angles, plus the "Business Cycle" of transiting Saturn. Each transiting aspect is ranked on a scale of -3 to +3 in terms of trading and investment potential, which alone is worth the price of the book.

Here are early reviews by two of the world's leading astrologers after receiving an early draft of this book:

Ray's Jupiter and Saturn Transits: Mastering the Cycles of Life is a fabulous, comprehensive guidebook rich with humanistic wisdom for astrologers. This book is amazing... exceptional in every way! Articulating the Saturn and Jupiter transits to natal planets and angles, Ray offers special

emphasis on delineating the waxing and waning aspects. His house-by-house interpretation of these powerful astrological energies and influences brilliantly combines useful tips and insightful keywords. Ray also shares his valuable expertise in financial astrology by including the Financial Ranking for trading with the transits, which makes this book very special!

— Kathy Rose, renowned full-time consulting astrologer and curator of Rose Astrology, with over 40 years of professional practice

Jupiter and Saturn Transits: Mastering the Cycles of Life is a valuable reference guide from financial astrologer and analyst Raymond A. Merriman. This book covers the transits of Jupiter and Saturn to one's natal chart and applies them to financial trading or investing. Ray has once again dispensed his wisdom and decades of research experience in 400+ pages of a keepsake for this and future generations of astrologers.

The book begins with a personal story, perfectly setting the stage for Ray's analysis of how these two powerful influencers can affect one's life, and what opportunities or potential pitfalls in trading might also appear. Written in a clear reference style, it allows readers to go directly to the areas that are affecting them now. As the planets advance, check the latest updates, and then use the book the rest of the time as an astrology textbook on synthesizing transiting planets, the most-requested area of astrology for consultations and readings.

For traders or investors, the inclusion of Ray's practical +3 to -3 "Ranking of Financial and Trading Potential" is worth the book alone, providing a quick scale to evaluate periods of potential opportunity or caution during a Jupiter or Saturn transit. No question, Ray has penned another classic. This book should be in any astrologer's collection, whether they are involved in the financial markets or not.

— Thomas Miller, prominent astrologer and host of the popular daily audio program, the *Fun Astrology with Thomas Miller* podcast

The book **JUPITER AND SATURN TRANSITS: MASTERING THE CYCLES OF LIFE** is due for release in mid-August. The list price is \$39.99. However, those who order now, prior to the actual printing of the book in mid-August, will receive the special pre-publication price of \$33.00 (plus postage for the printed edition; the eBook requires no postage). To order at the pre-publication price, click [here](#).

NOTE 5: THE [JUPITER REPORT: YOUR MOMENTS OF OPPORTUNITY!](#) The *Jupiter Report* is written by Raymond Merriman. It is a 30- to 40-page report that all traders (and even non-traders) will find highly valuable. It identifies the times during the year when Jupiter transits are highlighted in your natal chart and explains the meaning of Jupiter's transits to your natal planets and angles over a 14-month period (including one month before your order date and one month after the year ends). *As an added bonus, each transit is ranked on a scale from -3 to +3 in terms of favorability for trading. Traders may find this especially valuable!* Would you like to know if you are under a +3 transit and therefore most likely to experience trading success? Or a -3 transit, with a stronger-than-usual potential for misjudgments that can be costly? The price for a personal 14-month *Jupiter Report* based on your birth data is \$69.

Coming soon! *The Saturn Report: Mastering Your Life Cycles*. Due out in late summer or early fall.

NOTE 6: THE [MMA SOLAR-LUNAR APP](#) OFFERS REVERSAL SIGNALS FOR THE DJIA, NASDAQ, GOLD, AND SILVER. It is an ideal tool to have in your back pocket if you are a short-term swing trader looking for high-probability dates that identify isolated lows and highs in these markets. Please note that this should not be used as a standalone system. It works best as an adjunct tool when cycle lows or highs are due, when a market is in a technically overbought or oversold condition, or when it is exhibiting intermarket bullish

or bearish divergence relative to a related market. The app is currently available only on Apple devices (iPhone and iPad). *HOWEVER, IT WILL SOON BE AVAILABLE BY SUBSCRIPTION ON THE NEW MMA WEBSITE TO EVERYONE, INCLUDING USERS OF ANDROID PHONES, AROUND JULY 4!* To learn more about the MMA app, [click here](#). To order on your iPhone, go to the Apple App Store and search for Merriman Solar/Lunar Reversals.

EVENTS

JULY 12, 2026: Esoteric Economics course begins with Gianni Di Poce. The six-week course costs \$300 and runs from July 12 to August 16. See above for further details. Click [here](#) to register.

SEPTEMBER 3, 2026: A UAC PRE-CONFERENCE WORKSHOP ON FINANCIAL ASTROLOGY BY RAYMOND MERRIMAN, 1:00–5:00 PM. This workshop will take place at the United Astrology Congress (UAC), the largest astrological conference in the world, which is held every four to eight years. More than 150 world-class astrologers will be presenting, and over 1500 attendees will be present. The conference will be held at the Marriott Downtown Chicago Magnificent Mile Hotel. In addition to the workshop, Ray will present another lecture during the six-day event on mundane astrology, titled "What Is Happening in the World from an Astrological Viewpoint," on September 5. **For more information, visit www.uacastrology.com.**

Disclaimer and proper use of this information: Futures and options trading involve the risk of large losses as well as large gains.

Information is provided herein with sincere intent and according to MMA's original research studies and methodologies. These reports are provided mainly for "speculators." By its very nature, "speculation" means "willing to take the risk of loss." "Speculators" must be willing to accept the fact that they are going to have losing trades, many more than, say, "investors." That is why they are "speculators." The way "speculators" become profitable is not so much by a high percentage of winning trades but by controlling the amount of loss on any given trade, so the average trade on winners is considerably more than the average trade on losing trades.

MMA's comments, strategies, and data are provided as guidelines for traders each day and/or week. Comments and strategies are based upon intraday and intraweek highs, lows, and closes at the end of the day or week. Traders are advised to use these only as guidelines - and use intraday analysis to establish positions in the directions of comments given, so long as those support/resistance (entrance) areas. Looks favorable according to intraday analysis as well. Support and resistance are areas for day traders to look to buy and sell intraday. No guarantees are made for accuracy.

Support may represent favorable risk/reward places to buy if the trend is up. If prices trade below support, then have a close back above; it is considered a bullish "trigger" and oftentimes represents a good buy signal. Resistance may represent favorable risk/reward places to go short if the trend is down. If prices trade above it, then have a weekly close back below; it is considered a bearish "trigger" and oftentimes is a good sell signal.
