

**MMA WEEKLY STOCK INDICES REPORT  
FOR THE WEEK OF JULY 13, 2026**

**Note:** Mercury turned retrograde June 29 and will remain retrograde until July 23. As Ray has often advised, Mercury retrograde periods can coincide with mixed signals, false starts, and sudden reversals. Position traders may wish to exercise added caution before initiating new positions during this period and wait for stronger confirmation before entering new trades.

**GEOCOSMIC CRITICAL REVERSAL DATES (CRDs)**

These dates affect all markets. They are the midpoints of geocosmic clusters and have a normal orb of three days on either side (82% rate of frequency). Sometimes, they expand to as much as six days (90+% frequency with that orb). The idea is to see a new two-week or greater high or low and then a reversal. It is especially effective when major, half-primary, or primary cycle troughs are due. These are more important than the solar-lunar reversal dates: the more stars, the greater the historical correlation with a cycle culmination. Please read Volume 3 of the Stock Market Timing series for more information. Below is the midpoint date, and in parentheses, the length of time containing the geocosmic signatures (known as a "cluster"). If the cluster is long (more than 15 days), there may be other possible reversals based on tighter geocosmic clusters within the greater cluster.

**July 6\*\* (high in metals and DJIA)**

**July 11\* (midpoint of Mercury Rx when markets that did not reverse at the time of the retrograde +/- 2 trading days may do so now)**

**July 17-20\*\*\* (This is the magnet for trend continuation and then reversal +/- 10 days)**

**July 24-27\*\* (Mercury direct)**

**Aug 7-10\***

**Aug 14-17\*\***

These periods are usually more important than the solar/lunar reversal zones. They are usually more accurate because they have a wider orb of time (+/- 3 trading days vs. +/- 1 trading day for solar/lunars). They will correspond more often with major, half-primary, or full primary cycles, whereas lunar reversals need only correspond to 2.5% reversals in stocks.

**ABBREVIATIONS:**

**CRD = Geocosmic Critical Reversal Date**

**ATH = All-Time High**

**MA = Moving Average**

**PB = Primary cycle bottom**

**PT = Primary cycle top**

**MB = Major cycle bottom**

**MT = Major cycle top**

**TB = Trading cycle bottom**

**TT = Trading cycle top**

**DJIA Cash: Review by Gianni Di Poce and Ray Merriman, MMA Analysts:** Last week's range was above weekly resistance and below weekly support, but the close was back between the two, and therefore the close was mixed. The close was above the weekly trend indicator point (TIP) for the 15<sup>th</sup> consecutive week, which means it remains in a trend run-up.

This week's trend indicator point (TIP) is 52,398. It will be downgraded to neutral if it closes below there this week.

Weekly support is 52,027-52,041. A trade below, followed by a close back above this range, is a bullish trigger.

Weekly resistance is 53,246-53,261. A trade above here, followed by a close back below this range, is a bearish trigger.

Bullish crossover zones are in effect at 42,515-42,826, 36,359-36,747, 35,379-35,753, 34,442-34,524, 32,890-33,248, 31,468-31,997, 30,488-30,521, 24,769-24,894, 21,925-22,561, 18,931-19,018, 18,043-18,408, 17,348-17,352, 15,029-15,149, 13,717-13,760, 13,070-13,163, 12,799-12,802, 11,513-11,572, and 8266-8433.

The DJIA closed above bearish crossover zones previously at 46,489-46,529, 46,178-46,285, 44,391-44,529, 44,071-44,213, 35,208-36,348, 34,981-35,530, 34,378-34,426, 27,522-28,013, 20,599-21,252, 18,318-18,367, 18,083-18,087, and 16,892-17,314, so these are now support.

### **Trend Indicator Studies**

The Basic Trend Indicator remains bullish. It hit another new all-time high on July 7 at 53,289, which happened after another higher-low via a major cycle trough on June 23 at 51,301. The trend is up. It can still make new highs in the primary and 50-week cycles. Still, as we are in the later stages of the primary cycle and downside risks are rising, caution is advised, given the intermarket bearish divergence signals that persist across all three indices.

The weekly trend-moving average indicator remains bullish in the Dow. The DJIA closed the week at 52,637, down 263 points from the prior week. The close was above the 25-week moving average (49,416), the 50-week MA (48,097), and the 78-week MA (46,123). The 25-week MA is above the 50-week MA, and the 25- and 50-week MAs are well above the 78-week MA. Prices are above all the moving averages, so it's bullish. The Dow hit another new all-time high last week, and still has time for additional 3-year cycle highs to form. The 50-week cycle has a range of 34-67 weeks, and in most cases, 38-62 weeks, so it was in the regular time band. This starts the 15<sup>th</sup> week of a new 50-week cycle. The risk now is the primary cycle. The faster-moving averages remain above the slower ones, and as long as this continues, the worst that could happen is for the Dow to be downgraded back to neutral.

Prices would have to decline below all moving averages to be downgraded back to neutral. The Dow would have to drop below each MA, with each faster MA crossing below the slower-moving averages, to be downgraded to "bearish." If prices remain above all three moving averages, it will remain fully bullish.

The daily moving average trend study (for traders) is bullish. The daily close (52,637) was *above* the 15-day moving average (52,250) and the 45-day MA at 51,080. The 15-day moving average is still above the 45-day moving average, and with prices above both, it's bullish. It would be downgraded back to bearish if prices close below both the 15-day average and the 45-day moving average, and if the 15-day average drops below the 45-day. It will be downgraded back to bullish-turning neutral if prices drop below the 15-day moving average, but it stays above the 45-day moving average.

## The Primary Cycle and Longer Cycles

**Preferred primary cycle labeling:** This week begins the 15<sup>th</sup> week in the primary cycle from the March 30 low at 45,057. The low that began the cycle was 19 weeks after the November 20 low at 45,728, and it fell within the regular 13-23 week range for a cycle low. It happened one day following the 3-day orb of the April 3-6 CRD, and followed a 7-week correction from the all-time high of February 10 at 50,512.

The primary cycle in the Dow is made up of two or three cycle phases. Major cycles (three-phase) in the Dow last 5-8 weeks, and half-primary cycles (two-phase) last 8-11 weeks. The Dow formed a major cycle trough on May 20 at 49,235, in the orb of the May 22-26 CRD and during the 3-8 day corrective time band for a low. It then formed another major cycle low on June 23 at 51,301, 6 weeks later, and also in the orb of the June 26-29 CRD. This week would therefore start the 3<sup>rd</sup> week in the third and final major cycle phase. It is next due to bottom in 3-6 weeks and coincide with the primary cycle low.

On June 10, the 10<sup>th</sup> week, it formed a 7-11 week half-primary cycle trough. Thus, the DJIA now begins the 5<sup>th</sup> week of its second half-primary cycle in a "combination" pattern. The next low is due in 2-6 weeks, but first, the primary cycle crest needs to occur. It may have happened on July 7 at 53,289, right in the orb of the July 6 CRD, but more confirmation is needed. Once complete, a 2-5 week corrective decline is anticipated into a primary cycle trough. It could even happen as soon as the upcoming July 17-20 CRD, especially if it doesn't make a new all-time high this week.

As explained last week and still the case, *“This first primary cycle phase within the greater 50-week cycle is bullish, and as a rule, cycles that spend more time going up than down exhibit “bullish right translation,” and often signal positive things for the cycle to follow. We’re looking for the primary cycle crest preferably in the July 17-20 CRD. There’s currently a bias for the next primary cycle to be bullish too.”* No change.

**Alternate primary cycle labeling:** There is none anymore.

### **Geocosmics and CRDs**

Last week stated, *“So far, we’re getting the rally higher to new all-time highs. This week also has Sun square Saturn on July 6 and Neptune retrograde on July 7. Neptune’s planetary directional changes are especially powerful for primary or greater cycle crests or troughs per our studies... We also have the Mercury Rx midpoint happening towards the end of this week (July 11), when markets that did not reverse around the start of the retrograde may do so within 2 trading days of the midpoint. So let’s see if the rally will reverse from a high later this week or if it can make it to the July 17-20 CRD period. The irrational exuberance of Jupiter trine Neptune and sextile Uranus (July 20-21) could be starting now.”* There’s a candidate for a primary cycle crest on July 7, but it’s too soon to know if that was the high.

This week kicks off the cluster of the July 17-20 CRD. It starts with Venus square Uranus on July 13, Uranus sextile Neptune on July 15, and then finally, Uranus trine Pluto on July 18. Let’s see if we get stocks accelerating and breaking out into these Uranus signatures, but keep in mind Mercury is still retrograde, which is notorious for fake-out buy and sell signals.

### **Technicals, Chart Patterns, and Price Targets**

**Price Targets & Chart Patterns:** The Dow continues to trade within the ascending price channel. As long as it stays within there, it’s bullish. If prices break out of these patterns while already in an uptrend, they can correspond to parabolic blow-off rallies. However, Mercury is retrograde, so these rallies can unwind just as fast.

The ideal upside target for a primary cycle crest is 55,000-56,000. In time, there’s an upside objective as high as 59,500-60,500 as well, but it’s unlikely to be achieved during this primary cycle. Once the primary cycle tops out, a retest of 51,000-52,000 would be in the cards. As long as the Dow holds above there, little reason exists to be bearish technically.

**Intermarket Divergence:** Although there are still concerns that the Dow keeps making new all-time highs, while ESU and NQU have not been able to exceed their all-time highs set on June 2 and June 22, respectively, it’s worth noting that NQU took out the June 26 low last week, while ESU did not. So, there’s technically a case of intermarket bullish divergence in play here too. This is typical of Mercury Rx conflicting technical signals. We could see a situation where the Dow pauses here while ESU and NQU start rallying again.

**Oscillator:** The RSI indicator hit a new overbought reading above 70 last week, effectively nullifying the previous bearish divergence signal. This leaves the door open for another rally to new all-time highs before it tops out. There’s a slight divergence in the Slow Stochastics, but nothing too alarming just yet.

**Solar-lunar studies from 1930 by MMTA graduate student Yating Hu. We will now give values for full reversal, as well as highs and lows.**

Lunar cycles for the next two weeks are as follows: Anything above 113 means there is a higher-than-expected probability of a reversal from an isolated high or low. The more \*, the more likely a reversal. The more #, the less likely a reversal. If it states, "often a high" or "often a low," it means that a high or a low has occurred about twice as often as a high or a low in the past. However, if the value has an asterisk next to it, it should be looked upon more as a reversal, whether historically it has been more often a high or a low. Other figures to the right indicate reversal periods that deserve attention, as shown by the recent studies by MMTA student Yating Hu.

|              | <u>Reversal 3%</u> | <u>High</u> | <u>Low</u> |
|--------------|--------------------|-------------|------------|
| Jul 9-10     | 96.9               | 76.1        | 117.5*     |
| Jul 11-12    | 82.7               | 93.9        | 71.8       |
| Jul 13-14    | 95.5               | 68.0        | 122.5*     |
| Jul 15-16    | 98.8               | 125.9*      | 72.2       |
| Jul 17-18    | 86.7               | 87.5        | 85.9       |
| Jul 19-20    | 102.8              | 124.5*      | 81.6       |
| Jul 21-22    | 94.9               | 112.7       | 77.5       |
| Jul 23       | 86.2               | 73.3        | 98.2       |
| Jul 24-25    | 78.3               | 92.4        | 65.1       |
| Jul 26-28    | 96.3               | 121.5*      | 72.6       |
| Jul 29-30    | 115.9              | 83.8        | 146.1*     |
| Jul 31-Aug 2 | 94.0               | 91.4        | 96.5       |

**Strategy: Position traders** are long with a stop loss on a daily close below 51,202 now after covering 2/3 for an excellent first profit. Let's cover the final 1/3 on a rally to 55,000 +/- 60 if offered and stand aside.

**Aggressive traders** are flat and may go long on a drop to 51,960 +/- 60 with a stop loss on a close below 51,202 if offered.

**Very aggressive traders** are long with a stop-loss on a close below 51,202, after covering 1/3 for a nice first profit. Traders were advised, "Let's cover another 1/3 on a rally to 53,000 +/- 60 if offered." Got this off for another excellent profit. Let's cover the final 1/3 on a rally to 55,000 +/- 60 if offered and stand aside.

#### ESU (Sep S&P e-mini) by Gianni Di Poce, MMA Analyst.

Last week's close was mostly bullish again. The close was above the weekly trend indicator point (TIP) for the 2<sup>nd</sup> consecutive week, which means it remains neutral.

This week's trend indicator point (TIP) is 7510.50. It will be upgraded to a trend run up if it closes higher this week.

Weekly support is 7516.25-7540.25. A close below this range would be bearish, whereas a trade below and a close back above is a bullish trigger.

Weekly resistance is 7676.50-7700.25. A close above this range would be bullish, whereas a trade above and a close back below is a bearish trigger.

Bullish crossover zones are in effect at 5747.25-5853.75, 4684.50-4698.25, 4459.25-4460.50, 4221.75-4252, 3742.50-3817, 2588.25-2617.50, 2206.75-2219.25, 1661.25-1663, 1405.50-1418, 1381.75-1382.75, 1263-1263.25, 1184.25-1196.75, 889.55-902.40, and 791.10-791.25.

Prices previously closed above bearish crossover zones at 7598.50-7604, 5459.75-5537.75, 4562-4566.25, 4439.50-4472.50, 4016.75-4051, 3375.50-3404.75, and 3180.50-3312.75, so these are support.

**Preferred primary cycle labeling:** This week begins the 15<sup>th</sup> week in the primary cycle from the March 31 low at 6353.25. The low was 19 weeks following the November 21 low at 6525, in the regular 15-23 week time band for a low, and it was in the orb of the April 3-6 CRD.

The S&P also begins the 15<sup>th</sup> week of the 50-week cycle. The S&P still hasn't made a new cycle high beyond Tuesday of the 9<sup>th</sup> week, unlike the Dow. The sooner this happens, the better, and it looks like it wants to have a go at new all-time highs this week. Let's see if it follows through and gives the bullish confirmation signal.

The primary cycle breaks down into phases, including major cycles lasting 5-8 weeks and half-primary cycles lasting 8-12 weeks. The S&P completed a major cycle low on May 19, in the May 22-26 CRD, at 7354.25 after correcting for 3 days from the major cycle crest of May 14 at 7540. Another major cycle trough occurred on June 26 at 7357.25 following a 4-day corrective decline into the low from the June 22 crest. This week starts the 3<sup>rd</sup> week in the third and final major cycle phase. We enter the range for a low starting in 2 weeks. However, a combination pattern is unfolding because of the half-primary cycle low, with this week marking the 5<sup>th</sup> week in the second half-primary cycle from the June 11 low. There's still time for new highs in this primary cycle, but time is starting to run out. It's also shaping up for a potential primary cycle crest in the July 17-20 CRD.

**Alternate primary cycle labeling:** There is none anymore.

**Geocosmics:** Please read the commentary for this section in the DJIA analysis. The analysis there is precisely the same for the S&P now.

**Price targets and technicals:** The S&P looks to have confirmed a higher-low on June 26 via a major cycle trough. It continues to consolidate near the all-time highs, which is bullish price action. The long-term trend remains up, so the trend bias remains bullish.

The S&P is coiled up tightly within an ascending triangle formation and looks ready to break out. Can this follow through with Mercury retrograde? It may break out higher and then, when Mercury goes direct on July 23, it retreats hard. It has an upside target of 7950-8050 projected from this pattern. As explained last week and still the case, *"As long as the S&P stays above 7200-7250, it's still healthy from a technical standpoint. Note how the RSI indicator remains in the 40-60 range, which is ideal for a correction/consolidation. We need to be alert for the RSI to hit overbought (above 70) on any new highs from here on out, too."* No change.

**Strategy: Position traders** are long with a stop loss on a daily close below 7395 now, after covering 2/3 for an excellent profit already. Let's cover the final 1/3 on a rally to 8000 +/- 20 if offered and stand aside.

**Aggressive traders** are long with a stop loss on a daily close below 7395 now, after covering 2/3 for an excellent profit, buying back, and covering another 2/3 for an excellent profit. Let's cover the final 1/3 on a rally to 7800 +/- 12 if offered and stand aside.

**VAG traders** are long with a stop loss on a daily close below 7395 now, after covering 2/3 for an excellent profit. Let's cover the final 1/3 on a rally to 7800 +/- 12 if offered and stand aside.

#### **NQU (September e-mini-NASDAQ) by Pouyan Zolfagharnia, MMA Analyst.**

Last week's close was neutral with a bullish bias, with prices dropping into the weekly support zone, before closing back up above it. The close was above the TIP, retaining the neutral trend.

This week's TIP is 29,768.

Weekly support is 29,288-29,476. A close below this range would be bearish, whereas a trade below and a close back above is a bullish trigger.

Weekly resistance is 30,472-30,661. A close above this range would be bullish, whereas a trade above and a close back below is a bearish trigger.

Bullish crossover zones remain in effect at 28,130-28,447, 25,837-25,851, 20,430-20,824, 16,448.50-16,499.50, 16,190-16,194, 14,674.25-14,723.50, 13,670.25-13,711.25, 12,042.25-12,149, 11,280-11,345, 5711-5745, 5482-5516.50, 5259-5275, 5085.75-5093.50, and 4410-4418.

The new bearish crossover zone of **30,187-30,200** continues to act as resistance. Prices closed above previous bearish crossover zones at 18,812-18,818, 16,817-16,906, 16,108-16,197, 15,189-15,253, 12,955-13,084, 9073.50-9325.25, 6372-6489.50, 4747-4756, 4437-4540.25, 4410-4419, and 4176-4178. These are all support zones now.

**Preferred primary cycle labeling:** We are commencing week 15 of the 15-23-week primary cycle measured off the March 31 low of 22,962. This low was also a 50-week cycle bottom, as confirmed by the stellar rise to new ATHs.

We now have both confirmations of a bullish cycle: taking out the crest of the prior cycle and forming new highs after Tuesday of week 9. However, the Nasdaq has been unable to exceed that June 3 high in the September contract, which is a type of bearish market divergence (nearly versus front-month futures).

Major cycles in the NASDAQ form between weeks 5-8 in a classical three-phase cycle and 8-12 weeks in a two-phase cycle. The first major cycle low formed on May 19 at 28,663. The half-primary trough formed on June 9 in the 10<sup>th</sup> week. Therefore, we are in a bullish combination cycle. Thus, we are commencing the 8<sup>th</sup> week of the second major cycle and the 5<sup>th</sup> week of the second half-primary cycle. However, the half-primary-cycle labeling now appears to be the dominant interpretation. It's also possible the second major cycle low occurred on July 8, which was still in orb of the July 6 CRD. If it did, this would start the 1<sup>st</sup> week of the final major cycle. This is my bias, so it is new highs or bust from here for this primary cycle.

One troubling indicator now in effect is a bearish Lorusso 5-pointer, also called a "megaphone" chart pattern, where you get a high, then a low, then a higher high, then a lower low, and finally a third higher high. This 5-point reversal pattern often accompanies new bear markets but isn't confirmed until the last low (June 9) is taken out. A second troubling factor is that there is intermarket bearish divergence between all three indices, with the DJIA making a new high last week, the NASDAQ two weeks ago (on the continuous contract), and the S&P a month ago.

**Alternate primary cycle labeling:** There is none.

**Geocosmics:** As noted last week, "If not, we are still in the time band for a second major cycle low to form ideally this week or next." The low appears to have formed with the Neptune station retrograde. I

would still like to see one more rally into the July 17-20 CRD. The key will be whether it can hit new all-time highs.

**Price Targets and Technicals:** The upside 50-week MCP price target remains at 32,900 +/- 1,940. We are now within the lower boundaries of this target. Prices have been well supported by the 48-day moving average on pullbacks. A breach of this moving average going forward would be an early indication this primary cycle has topped out. If new highs are made, an upside price target for the final major and half-primary cycle crest could be 33,600 +/- 602.

**Strategy: Position traders** are long 2/3 again, having reloaded at the major cycle trough. The stop-loss is 27,100. Cover 1/3 at 31,000 +/- 100 if offered.

**Aggressive traders** are long 2/3 with a stop-loss below 28,000. Cover 1/3 at 30,800 +/- 100 and all at 31,000 +/- 100 if offered.

**Very aggressive traders** are long 1/3 with a stop-loss below 28,000. Cover all at 30,700 +/- 100 if offered.

### ANNOUNCEMENTS & EVENTS

#### ANNOUNCEMENTS

**NOTE 1: THE SIX-WEEK SUMMER SCHOOL COURSE ON ESOTERIC ECONOMICS: THE HIDDEN ARCHITECTURE OF WEALTH, BY GIANNI DI POCE, WILL BEGIN THIS SUNDAY, JULY 12.** This immersive, six-week online course is the complete companion to *Esoteric Economics*, the financial astrology textbook by [Gianni Di Poce](#). The course touches on conventional economics, but it also reveals the deeper, often invisible currents that truly govern wealth: archetypal forces, temporal rhythms, capital flows, and the ancient principles that have shaped civilizations for millennia. The course blends rigorous historical and technical analysis with esoteric insight, practical tools, and visionary thinking. You will not simply study economics—you will be initiated into its hidden language and learn to navigate it with clarity, confidence, and creative power. The cost of this six-week course is \$300, and registration is now open! Click [here](#) to register.

**NOTE 2: THE JULY ISSUE OF THE [MMA MONTHLY TECH REPORT](#) BY WIEBKE HELD WILL BE RELEASED THIS WEEK, ON JULY 14–15.** As we are now entering the critical Jupiter convergence period of July 15–21, with increasing bearish intermarket divergence signals between the major indices of the world, this will be an especially timely issue. And Wiebke's analysis has been especially on target during this period. Each report provides a clearly organized outlook with strategies not only for the NASDAQ but also for the QQQ ETF, NASDAQ futures, and specific technology stocks, including **Microsoft, Google, Nvidia, Tesla, and Apple**. It also includes CRDs (critical reversal dates) specific to the NASDAQ, based on Wiebke's meticulous research. Focusing on the NASDAQ is crucial because of the outsized role technology will play in financial markets, especially with Pluto already in Aquarius for several years and Uranus now in Gemini for nearly seven more years. If you would like to try a one-month subscription, you can sign up for the [July report](#) for only \$35—or save by ordering a three-report or twelve-report subscription.

**NOTE 3: COMING SOON: RAY MERRIMAN'S NEW BOOK, [JUPITER AND SATURN TRANSITS: MASTERING THE CYCLES OF LIFE](#).** This is Book One, the first of five books that will be written on the outer planets transiting the natal chart over the next four years. Nothing like this has ever been done in the history of astrology. This first book, covering the transits of Jupiter and Saturn, is approximately 425 pages long and includes all the major transits of Jupiter to one's natal planets and angles, including interpretations of the opening and closing sextile, square, and trine aspects. The Saturn section also includes the opening and

closing semi-square and sesquiquadrate transits to all natal planets and angles, plus the “Business Cycle” of transiting Saturn. Each transiting aspect is ranked on a scale of –3 to +3 in terms of trading and investment potential, which alone is worth the price of the book.

Here are early reviews by two of the world’s leading astrologers after receiving an early draft of this book:

*Ray Merriman’s book reads like the work of a seasoned authority, and its final line—“A new level of mastery awaits you”—feels entirely earned. Drawing on more than fifty years of experience in chart interpretation and the study of planetary transits in relation to financial cycles, Merriman demonstrates an impressive command of planetary timing. What makes this book especially valuable is not only the depth of its insight, but the clarity with which complex ideas are presented. His discussion of applying and separating aspects is particularly lucid, while his treatment of derivative houses stands out as both exemplary and distinctive. Although the book places a strong emphasis on financial astrology, its analysis extends well beyond money, offering thoughtful observations on many dimensions of human life. Traders, investors, and astrologers alike will find it highly rewarding, and even readers with extensive astrology libraries are likely to feel this volume deserves a place on their shelves.*

—Christeen Skinner, D.F.Astrol.S., FRSA, director of Cityscopes London Ltd., acclaimed financial astrologer, speaker, and author.

*Ray Merriman surprises us with a new book on transits. The book covers the delineation of planetary aspects of two of the most important traditional planets: the classical supportive and encouraging Jupiter aspects on the one hand, and the restrictive but also stabilizing Saturn aspects on the other. The descriptions of transits by an experienced and renowned astrologer are, together with his recommendations, of immense value. Going beyond the symbolic meaning of planetary combinations, Ray Merriman draws on his rich experience with planetary transits to provide the reader with practical interpretations and useful recommendations, with the aim of helping readers deal appropriately with the various transits of Jupiter and Saturn. To these, he adds advice for investors and traders in order to enable them to make the most of specific planetary transits. A highly recommendable and easily understandable book about transits for modern readers interested in the way astrology works in daily life. The depth of the interpretations provided should also serve as a source of inspiration for professional astrologers.*

—Claude Weiss, owner of Astrodata, Zurich, Switzerland, author of several books on astrology, and one of the world’s top mundane astrologers.

The book **JUPITER AND SATURN TRANSITS: MASTERING THE CYCLES OF LIFE** is now at the printer and is due for release in mid-August. The list price is \$39.99. However, those who order prior to August 10 will receive the special pre-publication price of \$33.00 (plus postage for the printed edition; the eBook requires no postage). To order at the pre-publication price, click [here](#).

**NOTE 4: THE [MMA SOLAR-LUNAR APP](#) OFFERS REVERSAL SIGNALS FOR THE DJIA, NASDAQ, GOLD, AND SILVER.** It is an ideal tool to have in your back pocket if you are a short-term swing trader looking for high-probability dates that identify isolated lows and highs in these markets. Please note that this should not be used as a standalone system. It works best as an adjunct tool when cycle lows or highs are due, when a market is in a technically overbought or oversold condition, or when it is exhibiting intermarket bullish

or bearish divergence relative to a related market. The app is currently available only on Apple devices (iPhone and iPad). *HOWEVER, IT IS NOW AVAILABLE BY SUBSCRIPTION ON THE NEW MMA WEBSITE TO EVERYONE, INCLUDING USERS OF ANDROID PHONES!* To learn more about the MMA app, [click here](#). To order on your iPhone, go to the Apple App Store and search for *Merriman Solar/Lunar Reversals*.

**NOTE 5: THE [JUPITER REPORT](#): YOUR MOMENTS OF OPPORTUNITY!** The *Jupiter Report* is written by Raymond Merriman. It is a 30- to 40-page report that all traders (and even non-traders) will find highly valuable. It identifies the times during the year when Jupiter transits are highlighted in your natal chart and explains the meaning of Jupiter's transits to your natal planets and angles over a 14-month period (including one month before your order date and one month after the year ends). *As an added bonus, each transit is ranked on a scale from -3 to +3 in terms of favorability for trading. Traders may find this especially valuable!* Would you like to know if you are under a +3 transit and therefore most likely to experience trading success? Or a -3 transit, with a stronger-than-usual potential for misjudgments that can be costly? The price for a personal 14-month *Jupiter Report* based on your birth data is \$69.

Coming soon! *The Saturn Report: Mastering Your Life Cycles*. Due out this fall.

## EVENTS

**JULY 12, 2026: *Esoteric Economics* course begins with Gianni Di Poce.** The six-week course costs \$300 and runs from July 12 to August 16. See above for further details. Click [here](#) to register.

**AUGUST 23, 2026: The next Options Webinar with Derek Panaia, Ray Merriman, and Wyatt Fellows.** Save the date! Details will be announced soon.

**SEPTEMBER 3, 2026: A UAC PRE-CONFERENCE WORKSHOP ON FINANCIAL ASTROLOGY BY RAYMOND MERRIMAN, 1:00–5:00 PM.** This workshop will take place at the United Astrology Congress (UAC), the largest astrological conference in the world, which is held every four to eight years. More than 150 world-class astrologers will be presenting, and over 1500 attendees will be present. The conference will be held at the Marriott Downtown Chicago Magnificent Mile Hotel. In addition to the workshop, Ray will present another lecture during the six-day event on mundane astrology, titled "What Is Happening in the World from an Astrological Viewpoint," on September 5. For more information, visit [www.uacastrology.com](http://www.uacastrology.com).

*Disclaimer and proper use of this information:* Futures and options trading involve the risk of large losses as well as large gains.

*Information is provided herein with sincere intent and according to MMA's original research studies and methodologies. These reports are provided mainly for "speculators." By its very nature, "speculation" means "willing to take the risk of loss." "Speculators" must be willing to accept the fact that they are going to have losing trades, many more than, say, "investors." That is why they are "speculators." The way "speculators" become profitable is not so much by a high percentage of winning trades but by controlling the amount of loss on any given trade, so the average trade on winners is considerably more than the average trade on losing trades.*

*MMA's comments, strategies, and data are provided as guidelines for traders each day and/or week. Comments and strategies are based upon intraday and intraweek highs, lows, and closes at the end of the day or week. Traders are advised to use these only as guidelines - and use intraday analysis to establish*

*positions in the directions of comments given, so long as those support/resistance (entrance) areas. Looks favorable according to intraday analysis as well. Support and resistance are areas for day traders to look to buy and sell intraday. No guarantees are made for accuracy.*

*Support may represent favorable risk/reward places to buy if the trend is up. If prices trade below support, then have a close back above; it is considered a bullish "trigger" and oftentimes represents a good buy signal. Resistance may represent favorable risk/reward places to go short if the trend is down. If prices trade above it, then have a weekly close back below; it is considered a bearish "trigger" and oftentimes is a good sell signal.*
