

**MMA WEEKLY STOCK INDICES REPORT
FOR THE WEEK OF JULY 20, 2026**

Note: Mercury turned retrograde June 29 and will remain retrograde until July 23. As Ray has often advised, Mercury retrograde periods can coincide with mixed signals, false starts, and sudden reversals. Position traders may wish to exercise added caution before initiating new positions during this period and wait for stronger confirmation before entering new trades.

GEOCOSMIC CRITICAL REVERSAL DATES (CRDs)

These dates affect all markets. They are the midpoints of geocosmic clusters and have a normal orb of three days on either side (82% rate of frequency). Sometimes, they expand to as much as six days (90+% frequency with that orb). The idea is to see a new two-week or greater high or low and then a reversal. It is especially effective when major, half-primary, or primary cycle troughs are due. These are more important than the solar-lunar reversal dates: the more stars, the greater the historical correlation with a cycle culmination. Please read Volume 3 of the Stock Market Timing series for more information. Below is the midpoint date, and in parentheses, the length of time containing the geocosmic signatures (known as a "cluster"). If the cluster is long (more than 15 days), there may be other possible reversals based on tighter geocosmic clusters within the greater cluster.

July 17-20* (Lows in metals, NASDAQ, high in Crude Oil, grains)**

July 24-27 (Mercury direct, begins this week)**

Aug 7-10*

Aug 14-17**

These periods are usually more important than the solar/lunar reversal zones. They are usually more accurate because they have a wider orb of time (+/- 3 trading days vs. +/- 1 trading day for solar/lunars). They will correspond more often with major, half-primary, or full primary cycles, whereas lunar reversals need only correspond to 2.5% reversals in stocks.

ABBREVIATIONS:

CRD = Geocosmic Critical Reversal Date

ATH = All-Time High

MA = Moving Average

PB = Primary cycle bottom

PT = Primary cycle top

MB = Major cycle bottom

MT = Major cycle top

TB = Trading cycle bottom

TT = Trading cycle top

DJIA Cash: Review by Gianni Di Poce and Ray Merriman, MMA Analysts: Last week's range was a bullish trigger. The close was below the weekly trend indicator point (TIP) for the 1st time in 16 weeks, which means it is downgraded back to neutral.

This week's trend indicator point (TIP) is 52,534. It will be upgraded back to a trend run up if it closes above there this week.

Weekly support is 51,677-51,780. A trade below, followed by a close back above this range, is a bullish trigger.

Weekly resistance is 52,615-52,718. A trade above here, followed by a close back below this range, is a bearish trigger.

Bullish crossover zones are in effect at 42,515-42,826, 36,359-36,747, 35,379-35,753, 34,442-34,524, 32,890-33,248, 31,468-31,997, 30,488-30,521, 24,769-24,894, 21,925-22,561, 18,931-19,018, 18,043-18,408, 17,348-17,352, 15,029-15,149, 13,717-13,760, 13,070-13,163, 12,799-12,802, 11,513-11,572, and 8266-8433.

The DJIA closed above bearish crossover zones previously at 46,489-46,529, 46,178-46,285, 44,391-44,529, 44,071-44,213, 35,208-36,348, 34,981-35,530, 34,378-34,426, 27,522-28,013, 20,599-21,252, 18,318-18,367, 18,083-18,087, and 16,892-17,314, so these are now support.

Trend Indicator Studies

The Basic Trend Indicator is still bullish despite last week's selloff. It didn't hit a new all-time high last week, and the one on July 7 at 53,289 continues to hold. This happened after another higher-low via a major cycle trough on June 23 at 51,301. The trend is still up. Near-term, we are in the later stages of the primary cycle, and downside risks are rising, so caution is advised. A higher-low is still anticipated via a primary cycle low at any time, and preferably in the next 2 weeks.

The weekly trend-moving average indicator remains bullish in the Dow. The DJIA closed the week at 52,146, down 490 points from the prior week. The close was above the 25-week moving average (49,538), the 50-week MA (48,269), and the 78-week MA (46,234). The 25-week MA is above the 50-week MA, and the 25- and 50-week MAs are well above the 78-week MA. Prices are above all the moving averages, so it's bullish. The Dow still has time for additional 3-year cycle highs to form. The 50-week cycle has a range of 34-67 weeks, and in most cases, 38-62 weeks. This starts the 16th week of a new 50-week cycle, so there's still plenty of time for new highs there too. The risk near-term remains with the primary cycle. The faster-moving averages remain above the slower ones, and as long as this continues, the worst that could happen is for the Dow to be downgraded back to neutral.

Prices would have to decline below all moving averages to be downgraded back to neutral. The Dow would have to drop below each MA, with each faster MA crossing below the slower-moving averages, to be downgraded to "bearish." If prices remain above all three moving averages, it will remain fully bullish.

The daily moving average trend study (for traders) is downgraded this week. The daily close (52,146) was *below* the 15-day moving average (52,493) but above the 45-day MA at 51,387. The 15-day moving average is still above the 45-day moving average, but prices are in between now, so it's downgraded to bullish, turning neutral. It would be downgraded to neutral with a close below the 45-day MA. It would be downgraded back to bearish if prices close below both the 15-day average and the 45-day moving

average, and if the 15-day average drops below the 45-day. It will be upgraded back to bullish if prices rally back above the 15-day moving average and it stays above the 45-day moving average.

The Primary Cycle and Longer Cycles

Preferred primary cycle labeling: This week starts the 16th week in the primary cycle from the March 30 low at 45,057. The trough that started the cycle occurred 19 weeks after the November 20 low at 45,728, and in the regular 13-23 week range for a cycle low. It was also one day after the 3-day orb of the April 3-6 CRD and followed a 7-week correction from the all-time high of February 10 at 50,512. The decline lasted longer than 2-5 weeks because it was a drop into a 50-week cycle trough as well.

The primary cycle in the Dow breaks down into two or three cycle phases. Major cycles (three-phase) in the Dow last 5-8 weeks, and half-primary cycles (two-phase) last 8-11 weeks. The Dow completed a major cycle trough on May 20 at 49,235, in the orb of the May 22-26 CRD and during the 3-8 day corrective time band for a low. Another major cycle low formed on June 23 at 51,301, 6 weeks later in the orb of the June 26-29 CRD. This week therefore begins the 4th week in the third and final major cycle phase. The next low is due in 1-4 weeks and would coincide with the primary cycle low.

There's also a half-primary cycle to consider, which means a combination pattern is underway here. On June 10, in the 10th week, it formed a 7-11 week half-primary cycle trough. The DJIA is now in the 6th week of its second-half primary cycle. The next low is due in 1-5 weeks, and we have cyclical overlap between all trading cycles for a low starting the week of July 27 as Saturn turns retrograde. A primary cycle crest has now been confirmed on July 7 at 53,289. Typically, corrections from primary crests in bullish cycles last 2-5 weeks. This starts the 2nd week of the corrective decline, so a low could unfold at any time in the next three weeks now.

The good news is that we're just wrapping up the first primary cycle phase of the greater 50-week cycle. There are still favorable odds for new all-time highs to follow once this primary cycle resets. It also

spent more time going up than down, as it rallied into the 14th week. This portends positive omens for the primary cycle to follow.

Alternate primary cycle labeling: There is none anymore.

Geocosmics and CRDs

Last week stated, *"This week kicks off the cluster of the July 17-20 CRD. It starts with Venus square Uranus on July 13, Uranus sextile Neptune on July 15, and then finally, Uranus trine Pluto on July 18. Let's see if we get stocks accelerating and breaking out into these Uranus signatures, but keep in mind Mercury is still retrograde, which is notorious for fake-out buy and sell signals."* As Mercury retrograde comes to its end this week, it's worth noting how narrow the trading range was during this signature. A primary cycle low may be anticipated after Mercury goes direct on July 23. A sextile between Neptune and Pluto follows it on July 25, Saturn retrograde on July 26, Sun opposite Pluto on July 27, Sun trine Neptune on July 27, Venus square Mars on July 29, and Sun conjunct Jupiter on July 29. A primary cycle trough is anticipated in these next 2 weeks, preferably, with the July 17-20 CRD carrying over into the July 24-27 CRD.

Technicals, Chart Patterns, and Price Targets

Price Targets & Chart Patterns: The Dow is still trading within the ascending price channel. As long as it stays within there, it's bullish. At the least, a retest of the lower trendline of the formation is anticipated. However, it would be preferable if prices broke below the lower trendline, as that would signal that the rate of ascent is no longer valid. Such a momentum reset is typical of a market dropping into a primary cycle low.

The Dow fell short of the primary cycle crest target at 55,000-56,000. It stated, *"In time, there's an upside objective as high as 59,500-60,500 as well, but it's unlikely to be achieved during this primary cycle. Once the primary cycle tops out, a retest of 51,000-52,000 would be in the cards. As long as the Dow holds above there, little reason exists to be bearish technically."* No change here as a retest of 51,000-52,000 is anticipated. In theory, it could drop to that zone and still stay within the ascending channel. Thus, 49,000-50,000 may be a better downside target for a primary cycle low. Reaching this price target would also bring the Dow back to the previous half-primary cycle phase low of June 10 at 49,909.

Intermarket Divergence: The intermarket bearish divergence signal to ESU and NQU confirmed the primary cycle crest. But now, as we are in the time band for a primary cycle trough, intermarket bullish divergence is already emerging. NQU has taken out its lows from June 26 and, in the September contract, already broke below the low from June 9, while DJIA has not. It would be ideal if the Dow didn't break below the June 10 low, and instead just retested it.

Oscillator: The Dow was fresh off an overbought reading (above 70) at the July 7 high, which still confirms bullish momentum. The slow stochastics only flashed a slight case of bearish divergence. This signals that the decline is set to be corrective rather than the start of a new downtrend. The RSI is already in the 40-60 corrective range, so a low could unfold sooner rather than later.

Solar-lunar studies from 1930 by MMTA graduate student Yating Hu. We will now give values for full reversal, as well as highs and lows.

Lunar cycles for the next two weeks are as follows: Anything above 113 means there is a higher-than-expected probability of a reversal from an isolated high or low. The more *, the more likely a reversal. The more #, the less likely a reversal. If it states, "often a high" or "often a low," it means that a high or a low has occurred about twice as often as a high or a low in the past. However, if the value has an asterisk next to it, it should be looked upon more as a reversal, whether historically it has been more often a high or a low. Other figures to the right indicate reversal periods that deserve attention, as shown by the recent studies by MMTA student Yating Hu.

	<u>Reversal 3%</u>	<u>High</u>	<u>Low</u>
Jul 17-18	86.7	87.5	85.9
Jul 19-20	102.8	124.5*	81.6
Jul 21-22	94.9	112.7	77.5
Jul 23	86.2	73.3	98.2
Jul 24-25	78.3	92.4	65.1
Jul 26-28	96.3	121.5*	72.6
Jul 29-30	115.9	83.8	146.1*
Jul 31-Aug 2	94.0	91.4	96.5

Strategy: Position traders are long with a stop loss on a daily close below 51,202 now after covering 2/3 for an excellent first profit. Let's cover the rest here and stand aside. Look to buy back on a drop to 50,000 +/- 60 with a stop loss on a close below 49,697 if offered, but only after Mercury is direct on July 23.

Aggressive traders are flat and may go long on a drop to 50,000 +/- 60 with a stop loss on a close below 49,697 if offered.

Very aggressive traders are long with a stop-loss on a close below 51,202, after covering 2/3 for a nice first profit. Let's cover the final 1/3 at current price levels and stand aside this week.

ESU (Sep S&P e-mini) by Gianni Di Poce, MMA Analyst.

Last week's close was bearish. The close was below the weekly trend indicator point (TIP) for the 1st time in 3 weeks, which means it remains neutral.

This week's trend indicator point (TIP) is 7537.75. It will remain neutral unless it closes sharply higher or lower this week.

Weekly support is 7418.25-7436.50. A close below this range would be bearish, whereas a trade below and a close back above is a bullish trigger.

Weekly resistance is 7577.25-7595.50. A close above this range would be bullish, whereas a trade above and a close back below is a bearish trigger.

Bullish crossover zones are in effect at 5747.25-5853.75, 4684.50-4698.25, 4459.25-4460.50, 4221.75-4252, 3742.50-3817, 2588.25-2617.50, 2206.75-2219.25, 1661.25-1663, 1405.50-1418, 1381.75-1382.75, 1263-1263.25, 1184.25-1196.75, 889.55-902.40, and 791.10-791.25.

Prices previously closed above bearish crossover zones at 5459.75-5537.75, 4562-4566.25, 4439.50-4472.50, 4016.75-4051, 3375.50-3404.75, and 3180.50-3312.75, so these are support.

Preferred primary cycle labeling: This week starts the 16th week in the primary cycle from the March 31 low at 6353.25.

The S&P also starts the 16th week of the 50-week cycle. It's wrapping up the first primary cycle phase now, but the problem is that the S&P never made a new cycle high beyond Tuesday of the 9th week, unlike the Dow. It's not as big of an issue as long as the S&P bottoms by the 17th week, which would be the week of July 27. This is because a case of "bullish right translation" would be created under such circumstances. This occurs when a cycle spends more time going up than down, and the base expectation for the first phase of any new cycle is that it will be bullish.

The primary cycle is made up of phases that include major cycles lasting 5-8 weeks and half-primary cycles lasting 8-12 weeks. The S&P formed a major cycle low on May 19, in the May 22-26 CRD, at 7354.25 after dropping 3 days from the major cycle crest of May 14 at 7540. Another major cycle trough followed on June 26 at 7357.25 after a 4-day corrective decline into the low from the June 22 crest. This week starts the 4th week in the third and final major cycle phase. We enter the range for a low a week from now. It seems that numerous signals are pointing to the week of July 27. But a combination pattern is underway because of the more dominant half-primary cycle low on June 11. This week marks the 6th week in the second half-primary cycle from the June 11 low. This would imply at least another 2-6 weeks of downside and signal that a low is due by the week of August 3 at the earliest.

Alternate primary cycle labeling: There is none anymore.

Geocosmics: Please read the commentary for this section in the DJIA analysis. The analysis there is precisely the same for the S&P now.

Price targets and technicals: The S&P formed a lower-high on July 16 at 7632 via a half-primary cycle crest and double top to the June 1 high of 7632.50 on the continuous S&P chart. This occurred in the orb

of the July 17-20 CRD too. Still, a higher-low with respect to the trend is anticipated via a primary cycle trough anytime in the next 2-3 weeks. The long-term trend remains up, so the trend bias remains bullish.

The S&P continues to coil within an ascending triangle formation. However, with the primary cycle being so late, don't be surprised if this morphs into a rectangle pattern. Rectangles are also continuation patterns, which imply a trend continuation. An upside projection to 7950-8050 is still in play here, but a retest of 7200-7250 looks to be in play during the coming weeks. The RSI is already in the 40-60 corrective range, so really, a low could form at any time.

Strategy: Position traders are long with a stop loss on a daily close below 7395 now, after covering 2/3 for an excellent profit already. Let's cover the final 1/3 at current price levels, and look to buy back on a drop to 7270 +/- 12 with a stop loss on a daily close below 7168, but only after July 23 when Mercury goes direct.

Aggressive traders are long with a stop loss on a daily close below 7395 now, after covering 2/3 for an excellent profit, buying back, and covering another 2/3 for an excellent profit. Let's cover the final 1/3 at current price levels, and look to buy back on a drop to 7270 +/- 12 with a stop loss on a daily close below 7168.

VAG traders are long with a stop loss on a daily close below 7395 now, after covering 2/3 for an excellent profit. Let's cover the final 1/3 at current price levels, and look to buy back on a drop to 7270 +/- 12 with a stop loss on a daily close below 7168.

NQU (September e-mini-NASDAQ) by Pouyan Zolfagharnia, MMA Analyst.

Last week's close was bearish, with prices closing below the weekly support zone. The close was below the TIP, retaining the neutral trend.

This week's TIP is 29,526.

Weekly support is 27,941-28,097. A close below this range would be bearish, whereas a trade below and a close back above is a bullish trigger.

Weekly resistance is 29,595-29,751. A close above this range would be bullish, whereas a trade above and a close back below is a bearish trigger.

Bullish crossover zones remain in effect at 28,130-28,447 (that held the low), 25,837-25,851, 20,430-20,824, 16,448.50-16,499.50, 16,190-16,194, 14,674.25-14,723.50, 13,670.25-13,711.25, 12,042.25-12,149, 11,280-11,345, 5711-5745, 5482-5516.50, 5259-5275, 5085.75-5093.50, and 4410-4418.

The new bearish crossover zone of **30,187-30,200** continues to act as resistance. Prices closed above previous bearish crossover zones at 18,812-18,818, 16,817-16,906, 16,108-16,197, 15,189-15,253, 12,955-13,084, 9073.50-9325.25, 6372-6489.50, 4747-4756, 4437-4540.25, 4410-4419, and 4176-4178. These are all support zones now.

Preferred primary cycle labeling: We are commencing week 16 of the 15-23-week primary cycle measured off the March 31 low of 22,962. This low was also a 50-week cycle bottom, as confirmed by the stellar rise to new ATHs of 31,100 on June 3 in the September contract.

We have both confirmations of a bullish cycle: taking out the crest of the prior cycle and forming new highs after Tuesday of week 9. However, the Nasdaq has been unable to exceed that June 3 high in the September contract, which is a type of bearish market divergence between the continuous contract and the front-month futures contract. Thus, this may have been the primary cycle crest.

Major cycles in the NASDAQ form between weeks 5-8 in a classical three-phase cycle and 8-12 weeks in a two-phase cycle. We are in a bullish combination cycle. The first major cycle low formed on May 19 at 28,663. The half-primary trough formed on June 9 in the 10th week. Thus, we are commencing the 6th week of the second half-primary cycle. The second major cycle low either occurred on July 8 or on Friday, July 17. In either case, we are in the final phase of the cycle, which tends to see the most bearish move down into the primary cycle trough. As shown by the heat map for the timing of the primary cycle low, we are now in this orb, with the phases overlapping for a low ideally between August 3 and September 8.

As stated the past two weeks, *"One troubling indicator now in effect is a bearish Lorusso 5-pointer, also called a "megaphone" chart pattern, where you get a high, then a low, then a higher high, then a lower low, and finally a third higher high. This 5-point reversal pattern often accompanies new bear markets."* It is now confirmed as we took out the June 9 low in the September contract. A second troubling factor is that there is intermarket bearish divergence among all three indices: the DJIA made a new high on July 7, while the NASDAQ latest high was on June 16 on the continuous contract, and the S&P's latest high occurred about a month ago.

Alternate primary cycle labeling: There is none.

Geocosmics: As noted last week, *"The low appears to have formed with the Neptune station retrograde. I would still like to see one more rally into the July 17-20 CRD. The key will be whether it can hit new all-time highs."* If the second major cycle formed on July 8, the third major cycle crest may have formed last week on July 15. Under this scenario, we should see lower-highs and lower-lows until the primary cycle forms. The Sun's seasonal pattern for the Nasdaq suggests that the primary cycle is most likely to form with the Sun in Leo. The Sun enters Leo this week on July 22 and remains in that sign until

August 22. The key dates to watch are the first two weeks of August, when we have two CRDs in effect. The first is August 7-10, but the more important might be August 14-17.

Price Targets and Technicals: The upside 50-week MCP price target remains at 32,900 +/- 1,940. We satisfied the lower boundaries of this target with the crests that formed in June. As noted last week, *"Prices have been well supported by the 48-day moving average on pullbacks. A breach of this moving average going forward would be an early indication this primary cycle has topped out."* With prices now trading below the 48-day MA, and the faster 17-day MA crossing down, the trend is turning bearish.

The price target for the primary cycle trough is 27,142 +/- 934, which we began to enter on Friday. There is also strong support around the prior ATH of 26,350-27,000.

Strategy: Position traders are long 2/3 again, having reloaded at the major cycle trough. The stop-loss is 27,100, but let's raise it to 28,075. Cover 1/3 on a rebound to 29,100 +/- 100 and the remainder at 29,590 +/- 100 if offered.

Aggressive traders are long 2/3 with a stop-loss below 28,000. Cover 1/3 on a rally to 29,000 +/- 100 and the remainder at 29,100 +/- 100. Pivot short on a rally to 29,600 +/- 100 with a stop-loss above 30,100. If filled on shorts, look to cover 1/3 at 28,500 +/- 100, and 1/3 at 28,100 +/- 100 if offered.

Very aggressive traders are long 1/3 with a stop-loss below 28,000. Cover all at 29,000 +/- 100 if offered. Pivot short on a rally to 29,700 +/- 100 with a stop-loss above 30,000. If filled on shorts, look to cover 1/3 at 28,500 +/- 100, and 1/3 at 28,100 +/- 100 if offered.

ANNOUNCEMENTS & EVENTS

ANNOUNCEMENTS

NOTE 1: THE JULY ISSUE OF THE [MMA MONTHLY CYCLES REPORT PLUS+](#), edited by Pouyan Zolfagharnia, will be issued this week. This market letter is a very popular addition to the MMA Cycles Report (less technical, more visual, and contains horoscopes of current importance, high-quality analysis, and updates on MMA Cycles Report markets). The mid-month addendum to the MMA Cycles Report covers Pouyan's outlook on Gold, Silver, NASDAQ, and Crude Oil. It has stunning graphics and charts (people love it!) and is very readable. It contains more illustrations and references to geocosmics than most MMA Cycles reports and is only available by subscription to those who also subscribe to the MMA Monthly Cycles Report. If you wish to try this month's addendum, along with the latest issue of the MMA Monthly Cycles Report, sign up online at the link above. A subscription for a monthly copy of both reports is \$55. That will give you both the most recent July copy of the MMA Cycles Report and the monthly MMA Cycles Report Plus+ addendum coming out this week. For further information and ordering instructions, please [click here](#).

NOTE 2: THE MONTHLY [MMA GRAIN CYCLES REPORT](#) BY WYATT FELLOWS WILL BE ISSUED THIS WEDNESDAY, JULY 22. With Saturn and Neptune still within one year of their 36-year conjunction, which has historically correlated with large moves in grain prices, and with Jupiter having entered the fire sign of Leo on June 30, this is an excellent time to consider subscribing. Wyatt's analysis has been very accurate, and his writing style is very clear. Truly, if you are a trader of grains or a producer, this is a wonderful report to read every month. Wyatt is an exceptionally gifted analyst of Wheat, Corn, and Soybeans, which may now be on their way higher. To order a copy of this excellent report, please [click here](#).

NOTE 3: DUE OUT IN 2–3 WEEKS!!! RAY MERRIMAN’S NEW BOOK, [JUPITER AND SATURN TRANSITS: MASTERING THE CYCLES OF LIFE](#). This is Book One, the first of five books that will be written over the next four years on the outer planets transiting the natal chart. Nothing like this has ever been done before in the history of astrology. This first book, covering the transits of Jupiter and Saturn, is 420 pages long and includes all the major transits of Jupiter to one’s natal planets and angles, including interpretations of the opening and closing sextile, square, and trine aspects. The Saturn section also includes the opening and closing semi-square and sesquiquadrate transits to all natal planets and angles, plus the “Business Cycle” of transiting Saturn. Each transiting aspect is ranked on a scale of –3 to +3 in terms of trading and investment potential, which alone is worth the price of this book.

Here are early reviews by two of the world’s leading astrologers after receiving an early draft of this book:

Ray Merriman surprises us with a new book on transits. The book covers the delineation of planetary aspects of two of the most important traditional planets: the classical, supportive, and encouraging Jupiter aspects on the one hand, and the restrictive but also stabilizing Saturn aspects on the other. The descriptions of transits by an experienced and renowned astrologer are, together with his recommendations, of immense value. Going beyond the symbolic meaning of planetary combinations, Ray Merriman draws on his rich experience with planetary transits to provide the reader with practical interpretations and useful recommendations, with the aim of helping readers deal appropriately with the various transits of Jupiter and Saturn. To these, he adds advice for investors and traders in order to enable them to make the most of specific constellations. A highly recommendable and easily understandable book about transits for modern readers interested in the way astrology works in daily life. The depth of the interpretations provided should also serve as a source of inspiration for professional astrologers.

—Claude Weiss, owner of Astrodata, Zurich, Switzerland, author of several books on astrology, and one of the world’s top mundane astrologers.

Ray’s Jupiter and Saturn Transits: Mastering the Cycles of Life is a fabulous, comprehensive guidebook rich with humanistic wisdom for astrologers. This book is amazing... exceptional in every way!! Articulating the Saturn and Jupiter transits to natal planets and angles, Ray offers special emphasis on delineating the waxing and waning aspects. His house-by-house interpretation of the powerful astrological energies and influences brilliantly combines useful tips and insightful keywords. Ray also shares his valuable expertise in financial astrology by including the Financial Ranking for trading with the transits, which makes this book very special!

—Kathy Rose, renowned, full-time consulting astrologer and curator of Rose Astrology with over 40 years of professional practice.

The book **JUPITER AND SATURN TRANSITS: MASTERING THE CYCLES OF LIFE** is now at the printer. The list price is \$39.99. However, those who order prior to August 10 will receive the special pre-publication price of \$33.00 (plus postage for the printed edition; the eBook requires no postage). To order at the pre-publication price, click [here](#).

NOTE 4: THE SIX-WEEK SUMMER SCHOOL COURSE ON ESOTERIC ECONOMICS: THE HIDDEN ARCHITECTURE OF WEALTH, BY GIANNI DI POCE, WILL HOLD ITS SECOND CLASS THIS SUNDAY, JULY 19. There is still time to sign up and join. This immersive, six-week online course is the complete companion to *Esoteric Economics*, the financial astrology textbook by [Gianni Di Poce](#). The course touches on conventional economics, but it also reveals the deeper, often invisible currents that truly govern wealth:

archetypal forces, temporal rhythms, capital flows, and the ancient principles that have shaped civilizations for millennia. The course blends rigorous historical and technical analysis with esoteric insight, practical tools, and visionary thinking. You will not simply study economics—you will be initiated into its hidden language and learn to navigate it with clarity, confidence, and creative power. The cost of this six-week course is \$300, and registration is now open! Click [here](#) to register.

NOTE 5: THE [MMA SOLAR-LUNAR APP](#) OFFERS REVERSAL SIGNALS FOR THE DJIA, NASDAQ, GOLD, AND SILVER. It is an ideal tool to have in your back pocket if you are a short-term swing trader looking for high-probability dates that identify isolated lows and highs in these markets. Please note that this should not be used as a standalone system. It works best as an adjunct tool when cycle lows or highs are due, when a market is in a technically overbought or oversold condition, or when it is exhibiting intermarket bullish or bearish divergence relative to a related market. The app is currently available only on Apple devices (iPhone and iPad). *HOWEVER, IT WILL SOON BE AVAILABLE BY SUBSCRIPTION ON THE NEW MMA WEBSITE TO EVERYONE, INCLUDING USERS OF ANDROID PHONES!* **To learn more about the MMA app, [click here](#).** To order on your iPhone, go to the Apple App Store and search for *Merriman Solar/Lunar Reversals*.

NOTE 6: THE [JUPITER REPORT: YOUR MOMENTS OF OPPORTUNITY!](#) The *Jupiter Report* is written by Raymond Merriman. It is a 30- to 40-page report that all traders (and even non-traders) will find highly valuable. It identifies the times during the year when Jupiter transits are highlighted in your natal chart and explains the meaning of Jupiter's transits to your natal planets and angles over a 14-month period (including one month before your order date and one month after the year ends). *As an added bonus, each transit is ranked on a scale from -3 to +3 in terms of favorability for trading. Traders may find this especially valuable!* Would you like to know if you are under a +3 transit and therefore most likely to experience trading success? Or a -3 transit, with a stronger-than-usual potential for misjudgments that can be costly? The price for a personal 14-month *Jupiter Report* based on your birth data is \$69.

NOTE 7: The MMA Weekly [YouTube show](#), "Geocosmic Week in Review and Look Ahead," with Gianni Di Poce, is conducted on Wednesday evenings! Each 5- to 20-minute **FREE** episode reviews the previous week's market activity and the geocosmic signatures that will be in effect for the coming week and beyond. Last week's special guest was Crypto Damus (Robert Weinstein), a well-known market analyst specializing in cryptocurrency, with an interesting outlook on Bitcoin.

NOTE 8: MMA's Free Weekly Column Podcast Is Available on SPOTIFY, APPLE, and AMAZON! Now you can listen to a podcast of this weekly column by Thomas Miller on Saturdays! Thomas has an excellent voice and brings the weekly column to life in a personable and, at times, humorous fashion. Just follow Merriman Market Analyst on Spotify or Apple to listen to all our episodes. A new podcast episode will be released every weekend. This is a **FREE** service and is available to everyone. Check out our podcasts on [Apple](#), [Spotify](#), and [Amazon Music](#). It makes for great listening!

EVENTS

JULY 12, 2026: The *Esoteric Economics* course with Gianni Di Poce began on July 12, but it's not too late to join. The six-week course costs \$300 and runs through August 16. See above for further details. Click [here](#) to register.

AUGUST 23, 2026: The next Options Webinar with Derek Panaia, Ray Merriman, and Wyatt Fellows. Save the date! Details will be announced soon.

SEPTEMBER 3, 2026: A UAC PRE-CONFERENCE WORKSHOP ON FINANCIAL ASTROLOGY BY RAYMOND MERRIMAN, 1:00–5:00 PM. This workshop will take place at the United Astrology Congress (UAC), the largest astrological conference in the world, which is held every four to eight years. More than 150 world-class astrologers will be presenting, and over 1500 attendees will be present. The conference will be held at the Marriott Downtown Chicago Magnificent Mile Hotel. In addition to the workshop, Ray will present another lecture during the six-day event on mundane astrology, titled "What Is Happening in the World from an Astrological Viewpoint," on September 5. **For more information, visit www.uacastrology.com.**

Disclaimer and proper use of this information: Futures and options trading involve the risk of large losses as well as large gains.

Information is provided herein with sincere intent and according to MMA's original research studies and methodologies. These reports are provided mainly for "speculators." By its very nature, "speculation" means "willing to take the risk of loss." "Speculators" must be willing to accept the fact that they are going to have losing trades, many more than, say, "investors." That is why they are "speculators." The way "speculators" become profitable is not so much by a high percentage of winning trades but by controlling the amount of loss on any given trade, so the average trade on winners is considerably more than the average trade on losing trades.

MMA's comments, strategies, and data are provided as guidelines for traders each day and/or week. Comments and strategies are based upon intraday and intraweek highs, lows, and closes at the end of the day or week. Traders are advised to use these only as guidelines - and use intraday analysis to establish positions in the directions of comments given, so long as those support/resistance (entrance) areas. Looks favorable according to intraday analysis as well. Support and resistance are areas for day traders to look to buy and sell intraday. No guarantees are made for accuracy.

Support may represent favorable risk/reward places to buy if the trend is up. If prices trade below support, then have a close back above; it is considered a bullish "trigger" and oftentimes represents a good buy signal. Resistance may represent favorable risk/reward places to go short if the trend is down. If prices trade above it, then have a weekly close back below; it is considered a bearish "trigger" and oftentimes is a good sell signal.

By signing up for these reports, the reader agrees that he/she is solely responsible for any actions taken in markets, and neither the author, publisher, analyst, or any person associated with MMA assumes any responsibility whatsoever for the reader's decisions.
