

**MMA WEEKLY STOCK INDICES REPORT
FOR THE WEEK OF JUNE 8, 2026**

GEOCOSMIC CRITICAL REVERSAL DATES (CRDs)

These dates affect all markets. They are the midpoints of geocosmic clusters and have a normal orb of three days on either side (82% rate of frequency). Sometimes, they expand to as much as six days (90+% frequency with that orb). The idea is to see a new two-week or greater high or low and then a reversal. It is especially effective when major, half-primary, or primary cycle troughs are due. These are more important than the solar-lunar reversal dates: the more stars, the greater the historical correlation with a cycle culmination. Please read Volume 3 of the Stock Market Timing series for more information. Below is the midpoint date, and in parentheses, the length of time containing the geocosmic signatures (known as a "cluster"). If the cluster is long (more than 15 days), there may be other possible reversals based on tighter geocosmic clusters within the greater cluster.

May 25* (holiday, so May 22-26. Lows in DJIA, Gold, Silver, Euro, and T-Notes)**

June 26-29*

July 6**

July 17-20* (This is the magnet for trend continuation and then reversal +/- 10 days)**

These periods are usually more important than the solar/lunar reversal zones. They are usually more accurate because they have a wider orb of time (+/- 3 trading days vs. +/- 1 trading day for solar/lunars). They will correspond more often with major, half-primary, or full primary cycles, whereas lunar reversals need only correspond to 2.5% reversals in stocks.

ABBREVIATIONS:

CRD = Geocosmic Critical Reversal Date

ATH = All-Time High

MA = Moving Average

PB = Primary cycle bottom

PT = Primary cycle top

MB = Major cycle bottom

MT = Major cycle top

TB = Trading cycle bottom

TT = Trading cycle top

DJIA Cash: Review by Gianni Di Poce and Ray Merriman, MMA Analysts: Last week's close was a bearish trigger. The close was above the weekly trend indicator point (TIP) for the 10th consecutive week, which means it remains in a trend run-up.

This week's trend indicator point (TIP) is 50,699. It will be downgraded back to neutral if it closes below there this week.

Weekly support is 50,379-50,482. A trade below, followed by a close back above this range, is a bullish trigger.

Weekly resistance is 51,352-51,455. A trade above here, followed by a close back below this range, is a bearish trigger.

Bullish crossover zones are in effect at 42,515-42,826, 36,359-36,747, 35,379-35,753, 34,442-34,524, 32,890-33,248, 31,468-31,997, 30,488-30,521, 24,769-24,894, 21,925-22,561, 18,931-19,018, 18,043-18,408, 17,348-17,352, 15,029-15,149, 13,717-13,760, 13,070-13,163, 12,799-12,802, 11,513-11,572, and 8266-8433.

The DJIA closed above bearish crossover zones previously at 46,489-46,529, 46,178-46,285, 44,391-44,529, 44,071-44,213, 35,208-36,348, 34,981-35,530, 34,378-34,426, 27,522-28,013, 20,599-21,252, 18,318-18,367, 18,083-18,087, and 16,892-17,314, so these are now support.

Trend Indicator Studies

The Basic Trend Indicator remains firmly bullish despite Friday's selloff, and was reinforced again with last week's new all-time high. The question now is whether a drop into a half-primary cycle low has started. It could go either way because technically, we are not in a CRD period right now. There's still time for additional new highs in the primary and 50-week cycles.

The weekly trend-moving average indicator remains bullish in the Dow. The DJIA closed the week at 50,866, down 165 points from the prior week. The close was above the 25-week moving average (48,772), the 50-week MA (47,339), and the 78-week MA (45,535). The 25-week MA is still above the 50-week MA, and the 25- and 50-week MAs are well above the 78-week MA. Prices are above all the moving averages, so it's bullish. The Dow hit another new all-time high last week, and still has more time for additional 3-year cycle highs after forming its 50-week cycle low in the 51st week of the older cycle. The 50-week cycle has a range of 34-67 weeks, and in most cases, 38-62 weeks, so it was in the regular time band. This would only begin the 10th week of a new 50-week cycle. The faster-moving averages remain above the slower ones, and as long as this continues, the worst that could happen is for the Dow to be downgraded back to neutral.

Prices would have to decline below all moving averages to be downgraded back to neutral. The Dow would have to drop below each MA, with each faster MA crossing below the slower-moving averages to be downgraded to "bearish." If prices remain above all three moving averages, it will remain fully bullish.

The daily moving average trend study (for traders) remains bullish. The daily close (50,866) was *above* the 15-day moving average (50,517) and the 45-day MA at 49,428. The 15-day moving average is still above the 45-day moving average, and with prices above both, it's bullish. It would be downgraded back to bearish if prices close below both the 15-day average and the 45-day moving average, and if the 15-day average drops below the 45-day. It will be downgraded back to bullish-turning neutral if prices drop below the 15-day moving average, but it stays above the 45-day moving average. Note how prices tested the 15-day moving average at the major cycle low of May 20 after a 4-day corrective decline, which fits in the 3-8 day window.

The Primary Cycle and Longer Cycles

Preferred primary cycle labeling: This week starts the 10th week in the primary cycle from the March 30 low at 45,057. The low was 19 weeks after the November 20 low at 45,728, and in the typical 13-23 week range for a cycle low. It also unfolded one day beyond the 3-day orb of the April 3-6 CRD, after a 7-week drop from the all-time high of February 10 at 50,512.

The primary cycle in the Dow breaks down into two or three cycle phases. Major cycles (three-phase) in the Dow have a range of 5-8 weeks, while half-primary cycles (two-phase) have a range of 8-11 weeks. The Dow completed a major cycle low on May 20 at 49,235, within the orb of the May 22-26 CRD and in the 3-8 day corrective decline window for a bottom. This means that the 3rd week of the second major cycle phase starts this week, but there are questions now in terms of whether a half-primary cycle crest was completed on June 5 at 51,660. If so, a 3-13 day pause or corrective decline could be underway.

Last week stated, *"The expectation remains for a rally beyond Tuesday of the 9th week of the cycle. This finally comes into play this week, and it's due to this being the first primary cycle phase within the greater 50-week cycle. It's on the verge of a major bullish confirmation here."* And we finally satisfied this study, with the new all-time high on Friday of the 9th week. The bias here is for new cycle highs to continue into July.

Alternate primary cycle labeling: There is none anymore.

Geocosmics and CRDs

Last week stated, *"It looks like the May 20 low was the one that corresponded with a reversal in the Dow, and it occurred within the orb of the May 22-26 three-star CRD. However, the bigger story from a geocosmic standpoint was the breakout signatures that carried the Dow to a new all-time high. This was centered around the Sun-Uranus conjunction on May 22, the same day as a Venus-Neptune square. Markets were even able to shake off the Mars-Pluto square of May 26, and it looks like the harmonious*

Sun-Pluto trine (both in air signs) led to a continuation of the breakout. It's rather tame on the geocosmic front this week, with the next CRD not coming until June 26-29. However, we have a nice Venus/Jupiter conjunction taking place on June 9, which could provide a backdrop for a sustained drift higher in the coming weeks." Indeed, the breakout saw notable follow-through, save for a sharp pullback in the S&P and Nasdaq on Friday. There's only Venus conjunct Jupiter (June 9) and Venus ingressing into Leo (June 13) this week. There isn't a major geocosmic catalyst in play for a serious reversal in trend until the June 26-29 CRD.

Technicals, Chart Patterns, and Price Targets

Price Targets & Chart Patterns: The new all-time high further emboldens the bullish setup. If a half-primary cycle crest was complete on June 5, a higher-low is anticipated, which would further reinforce the bull trend. The Dow continues to rise after staging a breakout from a continuation pattern in the form of an ascending triangle. This is a powerful bullish signal since the Dow's trend remains bullish, and these patterns signal a continuation of that trend.

The breakout from the triangle points to a rally to at least 52,000-52,250, which overlaps with the previous upside objectives in the 53,450 +/- 1990 zone. Later on this year, the Dow has an upside objective in the 59,500-60,500 range, which may correspond to the next 50-week cycle crest. When it comes to support, the path of least resistance remains higher in the Dow as long as it holds above 48,500-49,000. For the next major cycle crest, the target is 54,379 +/- 1099.

In the event the Dow is now falling to a half-primary cycle low, the 45-day moving average may provide support on the decline.

Intermarket Divergence: All indices hit new all-time highs again last week, so there is no bearish intermarket divergence in play. This week, look for an index to make a new low, but not all three.

Oscillator: While the RSI indicator keeps signaling bearish divergence, it did register an overbought reading above 70 last week, which confirms bullish momentum. If prices are falling into a half-primary cycle low, we're already in the 40-60 range, where it could form as soon as this week.

Solar-lunar studies from 1930 by MMTA graduate student Yating Hu. We will now give values for full reversal, as well as highs and lows.

Lunar cycles for the next two weeks are as follows: Anything above 113 means there is a higher-than-expected probability of a reversal from an isolated high or low. The more *, the more likely a reversal. The more #, the less likely a reversal. If it states, "often a high" or "often a low," it means that a high or a low has occurred about twice as often as a high or a low in the past. However, if the value has an asterisk next to it, it should be looked upon more as a reversal, whether historically it has been more often a high or a low. Other figures to the right indicate reversal periods that deserve attention, as shown by the recent studies by MMTA student Yating Hu.

	<u>Reversal 3%</u>	<u>High</u>	<u>Low</u>
Jun 4-6	135.9*	158.8*	111.7*
Jun 7-8	98.0	90.4	106.0
Jun 9-10	73.7	66.3	81.6
Jun 11-12	102.0	109.3	94.4
Jun 13-14	119.8*	100.0	140.8*

June 15-16	93.9	91.4	96.5
June 17-18	129.6*	131.7*	127.4*
June 19-20	73.5	91.9	53.9

Strategy: Position traders are long with a stop loss on a daily close below 49,235 now after covering 1/3 for an excellent first profit. Let's cover another 1/3 on a rally to 52,300 +/- 60 if offered.

Aggressive traders are long with a stop on a daily close below 49,235 now after covering 2/3, buying back, and covering another 1/3 for an excellent profit. Traders were advised, "Let's cover 1/3 on a rally to 51,425 +/- 60 if offered." Got this off for another excellent profit. Let's cover the final 1/3 on a rally to 52,300 +/- 60 and stand aside.

Very aggressive traders were long with a stop on a daily close below 49,235 after covering 2/3 for an excellent first profit, buying back, and covering another 2/3 for an excellent profit. Traders were advised, "Let's cover the final 1/3 on a rally to 51,425 +/- 60 if offered and stand aside." Got this off for a final excellent profit. Let's buy back on a drop to 50,450 +/- 60 with a stop loss on a daily close below 50,009.

ESM (Jun S&P e-mini) by Gianni Di Poce, MMA Analyst. We switch to September next week.

Last week's close was bearish. The close was below the weekly trend indicator point (TIP) for the 1st time in 9 weeks, which means it is downgraded back to neutral.

This week's trend indicator point (TIP) is 7497.25. It will be upgraded back to a trend run up if it closes above there this week.

Weekly support is 7263.75-7295.50. A close below this range would be bearish, whereas a trade below and a close back above is a bullish trigger.

Weekly resistance is 7537.25-7568.75. A close above this range would be bullish, whereas a trade above and a close back below is a bearish trigger.

Bullish crossover zones are in effect at 5747.25-5853.75, 4684.50-4698.25, 4459.25-4460.50, 4221.75-4252, 3742.50-3817, 2588.25-2617.50, 2206.75-2219.25, 1661.25-1663, 1405.50-1418, 1381.75-1382.75, 1263-1263.25, 1184.25-1196.75, 889.55-902.40, and 791.10-791.25.

A new bearish crossover zone just formed at 7537.25-7542.75. Prices previously closed above bearish crossover zones at 5459.75-5537.75, 4562-4566.25, 4439.50-4472.50, 4016.75-4051, 3375.50-3404.75, and 3180.50-3312.75, so these are support.

Preferred primary cycle labeling: This week begins the 10th week in the primary cycle from the March 31 low at 6353.25. The low occurred 19 weeks after the November 21 low at 6525, and was in the regular 15-23 week range for a low. It also happened in the orb of the April 3-6 CRD.

The S&P also begins the 10th week of a newer 50-week cycle. Last week's report stated, "Since it's in the first primary cycle phase of this new and greater 50-week cycle, a rally beyond Tuesday of the 9th week is in play, and this could finally unfold this week. It hit a new all-time high again last week, and the powerful bullish price action stems from the first phase of the cycle's tendency to be bullish. In most instances, 50-week cycles have shown 8-week rallies at a minimum, and it played out this time around, too. This implies the period of "easy money" to the upside is coming to an end in the near term." The all-time high occurred

on Monday of the 9th week, so in theory, we're still looking for another high to confirm the bullish cycle. There is still plenty of time left for this to be achieved.

The primary cycle is made up of phases that major cycles last 5-8 weeks and half-primary cycles lasting 8-12 weeks. The S&P formed a major cycle low on May 19 at 7354.25 after correcting for 3 days from the major cycle crest of May 14 at 7540. It also occurred in the orb of the May 22-26 CRD. This week begins the 3rd week in the second major cycle phase, although we cannot rule out that a half-primary cycle crest occurred on June 1 at 7632.25. A 3-13 day corrective pullback into a half-primary cycle low could be underway, with a low set to form as soon as this week, potentially. This would imply a combination pattern is in play here in the S&P.

Alternate primary cycle labeling: There is none anymore.

Geocosmics: Please read the commentary for this section in the DJIA analysis. The analysis there is precisely the same for the S&P now.

Price targets and technicals: The S&P hit a new all-time high again last week, reinforcing the trend in favor of the bulls. Despite Friday's sharp selloff, there are no serious concerns unless prices take out the May 19 low at 7354.25. A higher-low here is anticipated. The rally from the broadening wedge formation a couple of weeks ago is still underway. The pattern projects a rally as high as 7650-7700 in time, probably in this primary cycle. This could be the price zone for the primary cycle crest to occur, but it may rally as high as 7750-7800.

There was a slight case of bearish divergence in price from the RSI indicator at the June 1 high. But with Friday's sharp decline, it's already in the 40-60 corrective RSI zone for a low to form. The path of least resistance remains higher as long as the S&P is above 7050-7150, which was the former resistance near the previous all-time high. There's additional support in the 7250-7300 range (also where the 45-day

moving average is currently), which looks to be coming into play this week, and above there, it remains bullish. Some sideways action after a low here wouldn't be a bad thing.

Strategy: Position traders are long with a stop loss on a daily close below 7230 now, after covering 2/3 for an excellent profit already.

Aggressive traders are long with a stop loss on a daily close below 7230 now, after covering 2/3 for an excellent profit, buying back, and covering another 1/3 for an excellent profit. Let's cover another 1/3 on a rally to 7645 +/- 12 if offered.

VAG traders are long with a stop loss on a daily close below 7230 after covering 1/3 for an excellent profit. Let's cover another 1/3 on a rally to 7645 +/- 12 if offered.

NQM (June e-mini-NASDAQ) by Pouyan Zolfagharnia, MMA Analyst. Note that we will be delaying the switch of contracts to next week, as the majority of the volume is still in June, and I want to highlight the new bearish crossover zone before switching to the September contract (NQU). The September contract is currently trading approximately 282 basis points above the June contract.

Last week's close was very bearish, with prices rallying into the weekly resistance zone before giving it all up and closing below the weekly support zone. The close was below the TIP, downgrading it to neutral.

This week's TIP is 29,661. It will be upgraded back to a trend run-up if we can close back above here this week.

Weekly support is 27,816-28,138. A close below this range would be bearish, whereas a trade below and a close back above is a bullish trigger.

Weekly resistance is 29,843-30,164. A close above this range would be bullish, whereas a trade above and a close back below is a bearish trigger.

Bullish crossover zones remain in effect at 28,130-28,447, 25,837-25,851, 20,430-20,824, 16,448.50-16,499.50, 16,190-16,194, 14,674.25-14,723.50, 13,670.25-13,711.25, 12,042.25-12,149, 11,280-11,345, 5711-5745, 5482-5516.50, 5259-5275, 5085.75-5093.50, and 4410-4418.

Prices closed above previous bearish crossover zones at 18,812-18,818, 16,817-16,906, 16,108-16,197, 15,189-15,253, 12,955-13,084, 9073.50-9325.25, 6372-6489.50, 4747-4756, 4437-4540.25, 4410-4419, and 4176-4178. These are all support zones now.

Preferred primary cycle labeling: We are commencing week 10 of the 15-23-week primary cycle measured off the March 31 low of 22,962. This low was also a 50-week cycle bottom as confirmed by the stellar rise to new ATHs.

We now have both confirmation of a bullish cycle by taking out the crest of the prior cycle and forming new highs after Tuesday of week 9.

Major cycles in the NASDAQ form between weeks 5-8 in a classical three-phase cycle and 8-12 weeks in a two-phase cycle. The first major cycle low formed on May 19 at 28,663. We then rallied to a new ATH of 30,808 on June 3, which is likely to have been the half-primary crest. As noted last week, *"It is still possible that this cycle may break down into a combination pattern, so we have to remain aware of the*

possibility of a sharp decline into a half-primary cycle over the next 4 weeks, into the end of June. Whilst the momentum is very bullish, the seasonal patterns show a low is possible at the end of June, which could also be the second major cycle trough.” We got the sharp selloff on Friday, dropping back to the ascending trendline. We are yet to see any bullish divergence in the CCI on the 4-hour chart, which makes me believe prices are going to head lower and test the 48-day MA.

Whilst the price target for the corrective decline is 27,142 +/- 934 (using the September contract as it is trading approximately 300 basis points higher), this market has a lot of bullish momentum as we head towards the Jupiter convergence with Uranus, Neptune, and Pluto July 20-22. Therefore, the bullish crossover zone of 28,130-28,447 is important support, and we may even add 300 basis points to this as we are about to switch to the September contract.

Alternate primary cycle labeling: There is none.

Geocosmics: Whilst we did not have any powerful signatures last week, the only indicator of a sharp drop that I could see came from the Timing Solution charts, which I share in the MMA Monthly Cycles Report Plus+. Both the longer term and shorter term charts were showing a crest formation at the end of May – early June, with a decline into late June – early July. Perhaps this low will occur in the next CRD zone, which is June 26-29 +/- 3 trading days.

Price Targets and Technicals: The upside 50-week MCP price target is 32,900 +/- 1,940. We are marginally below this target. For the time being, we should see a corrective decline into 27,142 +/- 934 as the half-primary trough forms.

Strategy: Position traders are long 2/3 again, having reloaded at the major cycle trough. The stop-loss is 27,100. I brought the stop-loss up quite high last week, so consider bringing it down to 26,500 if your risk management allows. Look to go fully long if we get down to 27,000 +/- 100, with a stop-loss below 26,200.

Aggressive traders are long 2/3 with a stop-loss below 28,000. Let's reload and go fully long on a decline down to 27,810 and move the stop-loss to a close below 27,000.

Very aggressive traders are long 2/3 with a stop-loss below 28,000. Let's reload and go fully long on a decline down to 28,100 and move the stop-loss to a close below 27,000.

ANNOUNCEMENTS & EVENTS

ANNOUNCEMENTS

NOTE 1: [THE ANNUAL MMA MID-YEAR MARKET WEBINAR](#) WITH MMA MARKET ANALYSTS WILL TAKE PLACE ON SATURDAY, JUNE 20, AT 1:00 PM EDT!!! In the comfort of your own home or office, you can tune in to MMA's annual Mid-Year Financial Markets Update Webinar. This year's webinar will be in a different format than previous ones. It will be hosted by Raymond Merriman, who will introduce each market and then conduct an interactive interview with MMA analysts on that market, discussing its outlook for the second half of 2026. The analysts and markets to be covered this year will include NASDAQ (Wiebke Held), DJIA (Gianni Di Poce), Euro (Ulric Aspegren), Bitcoin (Ray Merriman), Silver and Crude Oil (Pouyan Zolfagharnia), and Gold and T-Notes (Wyatt Fellows). This webinar/workshop will last approximately three hours, with two five-minute breaks. The cost is \$66 (a super bargain for a workshop covering these markets), which includes access to the live presentation via Zoom, the presentation slides, and the video recording of the live event within 24 hours after the presentation. This is MMA's annual mid-year market update webinar. If you are unable to attend live, the video recording will be available the following day. To register, [click here](#).

NOTE 2: THE JUNE ISSUE OF THE [MMA MONTHLY CYCLES REPORT](#) WILL BE RELEASED THIS WEEK, JUNE 8–9. Each issue includes our outlook for the U.S. stock market (DJIA and S&P), Gold, Silver, Copper, Treasuries, the Euro currency, Crude Oil, and Soybeans. The MMA Monthly Cycles Report also provides MMA's original geocosmic CRDs and solar/lunar reversal dates for traders for the next several weeks, as well as trading strategies for both position traders and aggressive short-term traders. If you would like to try a one-month subscription, you can sign up for the [June report](#) of either issue for only \$35 — or save by ordering a three-report or twelve-report subscription.

Additionally, the monthly [MMA European Cycles Report](#), covering the DAX and SMI, which are also at critical junctures, will be issued Tuesday–Wednesday.

NOTE 3: THE [MMA 2026 TRADING AND INVESTMENT RETREAT](#) was amazing! The best yet! Recordings are now available. In addition, recordings of each day are now available separately as well!

This special four-day retreat started off with Ray Merriman's introduction to the "Post–Aries Vortex Era," which officially began with the geocosmic setup on February 20, 2026, and the political event of April 7, 2026.

This retreat included special presentations and interactive discussions on current and future world conditions through 2030 that are likely to affect financial markets. These were led by world-class mundane astrologers Claude Weiss (Switzerland), Christeen Skinner (UK), Christof Niederwieser (Germany), Pouyan Zolfagharnia (UK), and Raymond Merriman (USA). Joining them to discuss MMA timing methods and short-term trading strategies were MMTA Director Wiebke Held (Germany) and MMA analysts Wyatt Fellows (USA), Ulric Aspegren (Switzerland), Gianni Di Poce (USA), and MMA Trading Coach Rita Perea (USA).

The retreat covered the unique, research-based MMA methods for identifying primary, half-primary, major, and trading cycles. *It also covered the setup and steps needed for applying MMA's solar/lunar reversal dates for very short-term aggressive trades in Bitcoin, stock indices, and precious metals.*

Individual-day recordings from the MMA 2026 Investment Retreat are also now available for purchase. Thursday, Friday, and Sunday recordings are available for \$1,000 each, and Saturday's recording is available for \$750. If you are interested in purchasing individual retreat recordings, please contact customerservice@mmacycles.com to request an invoice and place your order. These recordings are well worth the investment, especially for traders!

To order the recordings of this special event, please [click here](#).

NOTE 4: A SIX-WEEK SUMMER SCHOOL COURSE ON ESOTERIC ECONOMICS BY GIANNI DI POCE WILL BEGIN ON SUNDAY, JULY 12. Stay tuned for details and registration information. This course will be based on Gianni's new book of the same name, which has just sold out of its first printing. A second printing will be ready in time for this course. The cost for this six-week course is \$300. Registration is now open! Click [here](#) to register.

NOTE 5: COMING SOON: RAY MERRIMAN'S NEW BOOK ON "JUPITER AND SATURN TRANSITS: MASTERING THE CYCLES OF LIFE." This is NOT the book you would expect from Ray Merriman. But it is a book you will need, use, and value for the rest of your life if you study astrology, and especially if you are also a trader. This 400+ page book covers all the major transits of Jupiter to one's natal planets and angles, including interpretations of the opening and closing sextile, square, and trine aspects. The Saturn section also includes the opening and closing semi-square and sesquiquadrate transits to all natal planets and angles, plus the "Business Cycle" of transiting Saturn. Each transiting aspect is ranked from -3 to +3 in terms of trading and investment potential, which alone is worth the price of the book. Stay tuned for a special pre-publication offer for the first edition of this new book by Ray Merriman.

Here is what one reviewer had to say about this book after receiving an early draft:

Ray Merriman's book reads like the work of a seasoned authority, and its final line—"A new level of mastery awaits you"—feels entirely earned. Drawing on more than fifty years of experience, Merriman demonstrates an impressive command of planetary timing. What makes this book especially valuable is not only the depth of its insight but also the clarity with which complex ideas are presented. His discussion of applying and separating aspects is particularly lucid, while his treatment of derivative houses stands out as both exemplary and distinctive. Although the book places a strong emphasis on financial astrology, its analysis extends well beyond money, offering thoughtful observations on many dimensions of human life. Traders, investors, and astrologers alike will find it highly rewarding, and even readers with extensive astrology libraries are likely to feel this volume deserves a place on their shelves.

—Christeen Skinner, D.F.Astrol.S., FRSA, Director of Cityscapes London Ltd.

The cost for this book is \$39.99. However, those who order now, prior to the actual printing of the book, due in mid-August, will receive the special pre-publication price of \$33.00 (plus postage for the printed edition; no postage is required for the eBook version). To order at the pre-publication price, click [here](#).

NOTE 6: WE HAVE RECENTLY COMPLETED A NEW UPGRADE FOR THE FAR FOR GALACTIC TRADER SOFTWARE PROGRAM!!! We can now conduct solar/lunar weighted value studies for any market by isolating or omitting any planet that is retrograde! For instance, we can now compare solar/lunar values

for any market when Mercury (or Venus, Mars, or any other planet) is retrograde or direct. This is important because we have noticed that when Mercury is retrograde, the lunar values for Bitcoin often perform differently than when Mercury is direct. If you don't own the FAR for the Galactic Trader program, which is key to conducting MMA research studies and identifying turning points in any financial market, and you wish to know more about it, please [click here](#). The cost is \$1895 (end-of-day version) and includes Jeanne Long's Galactic Trader software, featuring extensive W. D. Gann trading tools that she created.

NOTE 7: THE [JUPITER REPORT: YOUR MOMENTS OF OPPORTUNITY!](#) The *Jupiter Report* is written by Raymond Merriman. It is a 30- to 40-page report that all traders (and even non-traders) will find highly valuable. It identifies the times during the year when Jupiter transits are highlighted in your natal chart and explains the meaning of Jupiter's transits to your natal planets and angles over a 14-month period (including one month before your order date and one month after the year ends). *As an added bonus, each transit is ranked on a scale from -3 to +3 in terms of favorability for trading. Traders may find this especially valuable!* Would you like to know if you are under a +3 transit and therefore most likely to experience trading success? Or a -3 transit, with a stronger-than-usual potential for misjudgments that can be costly? The price for a personal 14-month *Jupiter Report* based on your birth data is \$69.

Coming soon! *The Saturn Report: Mastering Your Life Cycles*. Due out in late summer.

NOTE 8: THE [MMA SOLAR-LUNAR APP](#) OFFERS REVERSAL SIGNALS FOR THE DJIA, NASDAQ, GOLD, AND SILVER. It is an ideal tool to have in your back pocket if you are a short-term swing trader looking for high-probability dates that identify isolated lows and highs in these markets. Please note that this should not be used as a standalone system. It works best as an adjunct tool when cycle lows or highs are due, when a market is in a technically overbought or oversold condition, or when it is exhibiting intermarket bullish or bearish divergence relative to a related market. The app is currently available only on Apple devices (iPhone and iPad). **To learn more about the MMA app, [click here](#).** To order, go to the Apple App Store and search for *Merriman Solar/Lunar Reversals*.

EVENTS

JUNE 20, 2026: MMA'S ANNUAL MID-YEAR MARKETS UPDATE WEBINAR. Save the date! Note that the date has been moved up one day to Saturday, June 20, at 1 PM EDT.

JULY 12, 2026: "Esoteric Economics" course begins with Gianni Di Poce. The cost is \$300 for six weeks. Click [here](#) to register.

SEPTEMBER 3, 2026: A UAC PRE-CONFERENCE WORKSHOP ON FINANCIAL ASTROLOGY BY RAYMOND MERRIMAN, 1:00–5:00 PM. This workshop will take place at the United Astrology Congress (UAC), the largest astrological conference in the world, which is held every four to eight years. More than 150 world-class astrologers will be presenting, and over 1500 attendees will be present. The conference will be held at the Marriott Downtown Chicago Magnificent Mile Hotel. In addition to the workshop, Ray will present another lecture during the six-day event on mundane astrology, titled "What Is Happening in the World from an Astrological Viewpoint," on September 5. **For more information, visit www.uacastrology.com.**

Disclaimer and proper use of this information: *Futures and options trading involve the risk of large losses as well as large gains.*

Information is provided herein with sincere intent and according to MMA's original research studies and methodologies. These reports are provided mainly for "speculators." By its very nature, "speculation"

means "willing to take the risk of loss." "Speculators" must be willing to accept the fact that they are going to have losing trades, many more than, say, "investors." That is why they are "speculators." The way "speculators" become profitable is not so much by a high percentage of winning trades but by controlling the amount of loss on any given trade, so the average trade on winners is considerably more than the average trade on losing trades.

MMA's comments, strategies, and data are provided as guidelines for traders each day and/or week. Comments and strategies are based upon intraday and intraweek highs, lows, and closes at the end of the day or week. Traders are advised to use these only as guidelines - and use intraday analysis to establish positions in the directions of comments given, so long as those support/resistance (entrance) areas. Looks favorable according to intraday analysis as well. Support and resistance are areas for day traders to look to buy and sell intraday. No guarantees are made for accuracy.

Support may represent favorable risk/reward places to buy if the trend is up. If prices trade below support, then have a close back above; it is considered a bullish "trigger" and oftentimes represents a good buy signal. Resistance may represent favorable risk/reward places to go short if the trend is down. If prices trade above it, then have a weekly close back below; it is considered a bearish "trigger" and oftentimes is a good sell signal.
